A History Of Innovation

1892 - Present

Why Choose Elliott Tool?

In September 1892, an inventor and manufacturer named Gustav Wiedeke began a small manufacturing business in a modest building at the rear of his Dayton, Ohio home. Today, over 100 years later, Wiedeke Dayton has become Elliott Tool Technologies Ltd. due to Mr. Wiedeke's efforts.

The Wiedeke business continued to operate as a family enterprise for the next 32 years. By this time, Wiedeke products had earned a worldwide reputation for excellence in the industries they served. Wiedeke tools were innovative enough

to be covered by various patents and trademarks.

In 1916, William Elliott also recognized the need and opportunity in the industry for efficient tube cleaning equipment. Operating plants in both Ohio and Pennsylvania, the company went through several company name iterations (Lagonda Springfield and Elliott Springfield) and eventually became known as the Elliott Company. By the late 1960's, Elliott Company also enjoyed a worldwide reputation for its cleaning and turbo-machinery products. And in 1969,

acquired the Gustav Wiedeke Company.

Today we are a private company known as Elliott Tool Technologies. Boasting self directed work teams, exceptional customer service, and a continued commitment to produce tube tools Gustav Wiedeke and William Swan Elliott would be proud of.

Elliott Tool Technologies is proud to represent more than 125 years of manufacturing, sales, and engineering experience.

This is the oldest known photograph of the employees of the Gustav Wiedeke Company, Predecessor of the Elliott Company in Ohio. It was probably taken around 1906. Gustav Wiedeke, Jr., in vest, second from right.

Elliott Has The Tube Tools You Need To Get The Job Done

The last thing you should have to worry about is the quality of your tools. You can count on Elliott to provide tools that are tougher than the job and are the best in the industry. Whether it's a tube cleaner, tester, plug, removal, or installation, Elliott's full line of products is sure to have the tube tool you're looking for.

Alfa Laval ACE Reduces Expansion Cycle Times by 50%

Featured: (From left to right) Nang Pau- Operator, Jason Black- Quality Inspector, Charles Rice- CU Team Manager, Randy Hall- Quality Manager, Gin Sing- Operator, Ryan Pitre- Manufacturing Engineer, Travis McCollough- Quality Inspector, Mark Gorgas- Factory Manager. (From bottom Left to right) John R. Scott- SU Team Manager, Dave Foster- Maintenance Team Leader

QUICK SUMMARY

The Challenge

- Current tube rolling system was primarily by feel and did not provide the expansion consistency they wanted.
- Too much time spent re-rolling to pass hydro.
- Stopping periodically to lubricate their expanders was time consuming.

The Solution

- Elliott's Hybrid Series Rapid Hawk with pneumatic motor and Direct Torque™ electronic torque control.
- Production trials to determine joint consistency, ease of operator use, and rolling times.

The Results

- Time savings of 50% per tube and a cost savings of ~\$60,000 annually.
- Virtually zero tube leaks, reducing the number of man-hours attributed to re-rolling.
- Provided ± 2% variance from the target wall reduction.
- Significant time-savings from the through-the-cage auto-lubrication feature.
- Increased ergonomics reduced operator fatigue and strain.
- Increased tool life.

The Challenge

Alfa Laval ACE, located in Broken Arrow, OK, specializes in heat transfer, separation, and fluid handling technology. With a focus on producing quality air coolers for their customers, rolling consistency was of utmost importance. With their current tube rolling method relying heavily on operator feel to regulate the amount of wall reduction, the accuracy of wall reduction was lower than desired. This resulted in too much time spent re-rolling tubes.

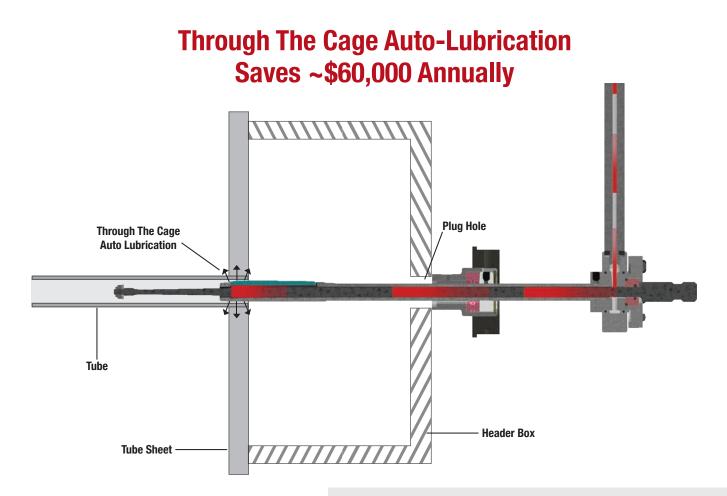

In addition to consistency, Alfa Laval was also looking for a method that would reduce the number of man-hours spent on a project. Due to their current tube rolling method, operators not only needed to regulate the amount of expansion taking place, they also had to stop periodically to re-lubricate the tooling. Operators

would spend up to 1,350 hours annually lubricating tooling alone. Not to mention, this process was extremely messy and resulted in extra time spent cleaning up excess lubricant. Overall, this heavy reliance on operator care increased the amount of time and cost spent on a project.

The Solution

With roll consistency being of top priority, the Alfa Laval Team was eager to find an alternative tube rolling method. After numerous conversations with Elliott representatives, the Alfa Laval Team decided that the Hybrid Series Rapid Hawk could be the most comprehensive solution.

Elliott's Hybrid Series Rapid Hawk utilizes a pneumatic motor to provide fast cycle times for each expansion. While pneumatic motors are faster than electric, they tend to have challenges with consistency due to fluctuations in air volume or pressure. The Hybrid Series is able to help Alfa Laval achieve their goal of more consistency and less rework by utilizing Direct Torque™, an electronic torque control built into the Hybrid Series that can work with any motor regardless of its power source. Additionally, the Auto-Lubrication feature would greatly reduce the amount of downtime between tube expansions by providing lubricant through the cage directly to the rolls and mandrel during each expansion. Operators would also appreciate the Auto-Cycle feature, as it would reduce the amount of time and

The Auto-Lube system has been huge, with a time savings of 50% per tube and a cost savings of ~\$60,000 annually.

-Ryan Pitre, Manufacturing Engineer, Alfa Laval

manual force required to insert and retract the expander from the tubes.

After receiving the Hybrid Series Rapid Hawk, Alfa Laval conducted several trials to determine wall reduction consistency, ease of operator use, and overall rolling cycle time.

The Results

The Hybrid Series Rapid Hawk produced positive results almost immediately. With roll consistency showing a significant improvement, Alfa Laval was pleased with the accuracy of the system. "We aim for an 8% reduction and the Hybrid Series gets us to that range so well," said Ryan Pitre, Manufacturing Engineer. "The quality and roll consistency is so much better. It takes into account all variables and executes precisely." The Hybrid Series rolled tubes within 2% of their target wall reduction

every time, whereas their previous tube rolling method had as much as 6% variation. This increase in consistency significantly reduced the number of man-hours attributed to re-rolling tubes, with virtually zero leaking joints at hydro testing.

The Hybrid Series was also able to reduce the tube-to-tube expansion cycle time and the overall cost to complete a project. "The Auto-Lube system has been huge, with a time savings of 50% per tube and a cost savings of ~\$60,000 annually," Ryan said. Not only did the auto-lubrication system save man hours from lubricating tooling, it also significantly reduced the time spent cleaning up excess lubricant.

The Direct Torque[™] control not only increased accuracy, but it also benefitted operators. The guesswork that was necessary with their previous tube rolling

system was eliminated, allowing them to complete their job faster. Additionally, the Auto-Cycle reduced the amount of time spent between expansions by starting, stopping, and reversing automatically. It also reduced the amount of manual force required to complete a job: "It [Auto-Cycle] makes it so easy to use. It draws itself into the tube and pushes itself out, so virtually no operator force is needed," Ryan said.

With the significant increase in accuracy and consistency, the Rapid Hawk Hybrid Series was able to help operators increase productivity. Overall, the Alfa Laval Team was extremely pleased with both the performance of the system and the support gained from the Elliott team. "Support was the reason we went with the Elliott equipment," Ryan explained, "The product is great and the people we worked with have been great."

Tube Hole Gauge

Hole Size

- 0.375" to 2.000" OD
- (9.5 to 51.0mm) OD

Elliott's Tube Hole Gauges make it easy to accurately measure tube IDs and tube sheet holes found in vessels such as heat exchangers, chillers, and surface condensers.

Simply insert the tube gauge in the tube or tube sheet hole and use the three point ball contact to obtain an accurate measurement. Elliott's Reversible Dial Plate offers metric on one side and inch/decimal on the other to suit your needs.

The standard measurement depth is 4" (101.6mm) or 8" (203.2mm) (see the table to the right) with additional extensions of 8" (203.2mm) available. See the Spares & Accessories section for more information on these extensions.

Features & Benefits:

- 3 point contact much more accurate than common 2 point calipers.
- · Can measure inside the tube where the actual rolling area
- More economical and rugged than electronic gauges.
- Easy to calibrate in field so accuracy is maintained.
- · Large, reversible dial face for easily measuring in inches and metric.

Tube Hole Gauge includes:

- Tube Hole Gauge
- · Setting Ring
- Wrench
- Storage Box

- Mandrel Extension: Will add 8" (203.2mm) to maximum reach. One Body Extension is required for each Mandrel
- Body Extension: Will add 8" (203.2mm) to maximum reach. One Mandrel Extension is required for each Body Extension.
- Mandrel
- Body
- Setting Ring

*Note: Extensions will add 8 inches of reach. Multiple extensions may be used to achieve a longer reach.

Tube Sheet Hole Brushes

Hole Size

- 0.250" to 1.250" OD
- (6.4 to 31.8mm) OD

Elliott's Tube Sheet Hole Brushes clean and remove hard deposits from tube sheets and support plate holes in surface condensers and heat exchangers.

These brushes are constructed of high carbon steel with a double twisted stem to provide for maximum life and durability.

- High carbon steel bristles for cleaning hard deposits.
- Brush stems are high carbon steel with a double twist for extra life. Brush stems could also be stainless steel.

Cutting Edge Design & Performance

Increase Mandrel Tool Life & Cutting Performance With Reusable Wear Pads

Elliott's newly redesigned GT Series Grooving & Serrating Tools are engineered for optimal cutting performance and tool life. Now equipped with a reusable wear pad, the new mandrel design allows for metal chips to escape easily, reducing damage to the mandrel and tube sheet hole.

Grooving (Serrating) Tools can be used manually to clean up existing grooves or in milling and drilling equipment for OEM tube sheet thicknesses of 3/8" (9.5mm) through 2-1/8" (54.0mm).

GT Series Grooving Tool includes:

- Cutter Bit (GT-31-3 configuration)
- Mandrel
- Wear Pad* *Only for GT750 sizes & up

*Sizes under 3/4" (19.1mm) do not require a wear pad.

Features & Benefits:

Improve Cutting Performance

Cutter bits are designed for extended tool life, allowing for repeatable, accurate cuts.

Extend Mandrel Tool Life

Mandrel wear pad reduces tool wear, eliminating the need to replace the mandrel.

Designed For Optimal Metal Chip Escape New mandrel design allows for optimal chip escape, reducing damage to the mandrel and tube sheet hole.

Suitable For A Variety Of Applications Designed for use in both manual and machining applications, the GT Series allows for customer flexibility.

Spares & Accessories:

- Cutter Bit: Available in different configurations for cutting ferrous and stainless steel materials.
- Mandrel
- Wear Pad Set

Hand Hole Seat Grinder

Seat Width

- 0.187" to 0.656"
- (4.8 to 16.7mm)

Elliott's 7099-1 Hand Hole Seat Grinder is air-powered, light, easy to handle, and precision-engineered to reface boiler header seats.

The Hand Hole Seat Grinder self-aligns for precision grinding every time, holding the grinding wheel securely in one plane. All movement of the grinder is confined precisely within the plane to ensure unvarying accuracy.

The model 7099-1 allows you to reach surfaces that hand methods can't get to and even reduces recurrent leakage around boiler plugs.

Features & Benefits:

- · Saves lots of time as the boiler does not need to be brought up in order to check for leaks.
- · Coarse grinding wheels available for quick removal of material. Fine grinding wheels available for smooth finish.

Specifications:

- Accommodates seat widths between 0.187" to 0.656" (4.7mm to 16.7mm).
- RPM: 5,000 @ 90 PSI.
- Weight: 30 Lbs (13.6 kgs).
- Includes guide rollers.

| RPM | PSI | Hose Connection | Hose Size |
|-------|-----|-----------------|----------------|
| 5,000 | 90 | 1/4 NPT | 5/16" (7.92mm) |

7099-1 Hand Hole Seat Grinder includes:

- · Hand hold grinding assembly with pneumatic motor
- Filter-Lubricator
- · Shut-off valve
- Hose whip
- Inspection mirror
- · Set of wrenches
- · Set of 4 Guide rollers
- · Carrying case

- Grinding Wheels
- Cup Brushes
- 702636 Extension Link: Used to extend reach beyond 11-1/2" (292.1mm).
- P7026-9 Wheel Dresser: Used for restoring the grinding surface of the grinding wheel.

Tube Size

- 0.250" to 2.000"+ OD
- (6.4 to 50.8mm) OD

Elliott's 430G Pneumatic Hammer is the recommended driving tool for Elliott's Beading Tools and Flaring Tools.

Beading Tools are made with different size radii for beading tubes in firetube boilers while Flaring Tools are used for flaring the inside of tube ends.

The 430G Pneumatic Hammer accepts Type No. 6 0.680" (17.3mm) diameter by 2-3/8" (60.3mm) long shanks.

Features & Benefits:

- Lightweight & compact design easy to move in tight areas.
- Uses retainers on tools improved operator safety.

Specifications:

- Piston Diameter & Stroke: 1-1/8" X 2" (28.6 X 50.8mm)
- Length (Overall): 14" (355.6mm)
- Blows per minute: 2,300Net Weight: 17 lbs. (7 Kg.)
- Air Requirement: 30 CFM @ 90 PSIHose Diameter: 1/2" (12.7mm)

Elliott's Pneumatic Beading Tools, used with the 430G Pneumatic Hammer, are made with different size radii for beading tubes in firetube boilers.

The standard Type No. 1 shank is 0.680" (17.3mm) diameter by 2-3/8" (60.3mm) long.

Elliott's Flaring Tools, used with the 430G Pneumatic Hammer, are used for flaring the inside of tube ends.

The standard Type No. 6 shank is 0.680" (17.3mm) diameter by 2-3/8" (60.3mm) long with an oval collar.

430G Pneumatic Hammer package includes:

- Hose Whip
- Filter-Lubricator
- · Carrying Case

- 6070 Filter-lubricator: Included with the 430G Pneumatic Hammer package.
- Flaring Tools.
- · Beading Tools.

ETF Series Tube End Facers

Tube Size

- 0.375" to1.500" OD
- (9.5 to 38.1mm) OD

Elliott's ETF Series Tube End Facers are ideal for trimming heat exchanger, condenser, and chiller tubes to a specific tube projection after tube expansion.

Each Tube End Facer is equipped with an adjustable collar to allow tubes to be faced flush or to a specified length from the tube sheet. Each Tube End Facer also incorporates a 3/8" (9.5mm) male hex.

The Tube End Facers use high alloy facer bits with two cutting edges that are specially coated for increased life. Elliott offers two bit styles, Non-Ferrous / Steel and Stainless Steel, to achieve optimum cutting efficiency.

Elliott's electric and pneumatic motors are excellent drivers for Tube End Facers. See next page for more information.

Features & Benefits:

- Economical & easy blade replacement.
- Standard pilot set included.
- Adjustable stand-off 1/4" to flush.

Tube Facer Includes:

- Tube Facer
- Facer Pilots
- Hex Keys

- Non-Ferrous Steel Facer Bits
- Stainless Steel Facer Bits
- Cutting Oil: See page 19 for part numbers.

Tube Pilots/Guides

Tube Size

- 0.500" to 1.500" OD
- (12.7 to 38.1mm) OD

Elliott's 63 Series Tube Pilots, also known as Tube Guides. are used to pilot tubes through tube sheets and tube support plates that are commonly found in heat exchangers.

The Tube Pilots consist of an aluminum tapered nose attached to a replaceable nylon brush. The nylon brush fits in the end of a tube, centering and holding the pilot firmly in place.

One Tube Pilot works for several gauges within a particular tube OD, saving you money and inventory space.

Features & Benefits:

- · Saves time and labor costs through faster guiding of replacement tubes through tube sheets & support plates.
- Nylon brush centers hold pilot in place, cleans the tube where it will be rolled.

Spares & Accessories:

Nylon brushes

63 series tube pilot includes:

• Aluminum tapered nose with a replaceable nylon brush attached.

900 Series

Flaring Boiler Expanders

Tube Size

- 0.620" to 1.500" OD
- (15.4 to 38.1mm) OD

Type

Flaring Boiler Expander

Application

 Superheaters in watertube boilers or evaporator tubes

Elliott's 900 Series Flaring Boiler Expanders are self-feeding, specifically made for use in superheaters in watertube boilers or evaporator tubes. In only one operation, these expanders roll and flare projecting tube ends at 15 degrees from the tool center line.

The expanding rolls will roll tubes ¼" (6.4mm) beyond the tube sheet thickness. The three flare rolls provide faster, more uniform flaring than other flaring expander models. The generous roll radius eliminates sharp offset within the tube. Additionally, the mandrel nut enables the assembly of the expander, mandrel, and drive as one unit.

Features & Benefits:

- 3 flare rolls for faster, more uniform flaring. Works evenly to the tube minimizing stress.
- Expander is self-feeding. In one operation expands and flares at 15 degrees.
- Specifically made for use in superheaters in watertube boilers or evaporator tubes. Readily available for evaporator tubes.

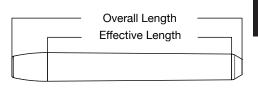

Mandrels are sold separately so users can choose from among a variety of mandrels best suited for their needs. Be sure to select a mandrel from the spares & accessories section below.

- Drum Mandrel: 10 1/2" (266.7mm) to 17 1/2" (444.5mm) long.
- Header Mandrel: For reaching through a header or water leg.
- 700 Series Short Mandrel: 7 1/4" (184.2mm) long. May require up to 2 mandrels to obtain full expansion range of the expander.
- 500 Series Short Mandrel: 5 1/2" (139.7mm) long. May require up to 2 mandrels to obtain full expansion range of the expander.
- Roll Set.
- Tube Rolling Lubricant See page 19 for part numbers.

900 Series Flaring Boiler Expanders

| Specifications / Tool Number for She | Roll Dimensions | | |
|--------------------------------------|-----------------|-----------------|-----------------|
| Tube Sheet Thickness | хх | Overall Length | Eff. Length |
| 1/2" - 7/8" (12.7 - 22.2mm) | 15 | 1.000" (25.4mm) | .750" (19.1mm) |
| 1" - 1-3/8" (25.4 - 35mm) | 21 | 1.500" (38.1mm) | 1.250" (31.8mm) |
| 1-1/2" - 1-7/8" (38.1 - 47.6mm) | 23 | 2.000" (50.8mm) | 1.75" (44.5mm) |
| 2" - 2-3/8" (50.8 - 60.3mm) | 25 | 2.500" (63.5mm) | 2.250" (57.2mm) |

xx signifies tube sheet thickness. Enter two digits for desired roll length for expander and roll set part numbers.

Employee turnover is not a new phenomenon, but it has become more challenging for companies in recent years due to many global changes. Additionally, with many industries experiencing an increase in retirements, organizations are struggling with the loss of tribal or field knowledge. As a result, many companies are looking for better ways to hire, train, and retain workers in the field, to make the process more efficient.

Investing in regular employee trainings are a great way to train new employees, adopt more efficient processes, and ensure that the entire team is up to date on industry best practices.

1. Increase Operator Retention

Working in a niche market, it can be challenging to find new workers with field experience. This makes training critical for operator training and retention. Historically, many organizations would rely on workers with the most seniority to teach new hires how to successfully perform the job. While this is beneficial, having a formal training program can reduce the learning curve and ensure everyone is working to the same standard. For example, over time steps can be forgotten or changed, so it's important that everyone on the team have the option to refresh their skills. It also makes sure that everyone is aware of any technical advancements or changes that may have been made over the years to help make the job easier.

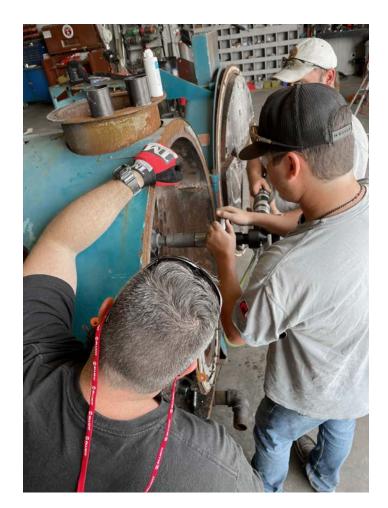

2. Improve Ergonomics & Productivity

In an industry as old as vessel fabrication and maintenance, there are many processes that have grown and adapted to make the job easier. Whether it's changes to the process or innovation in tooling, the industry has changed to better assist operators. For example, many boilermakers remember having to hand bead tubes using a pneumatic hammer and beading tool. This process can be extremely tiring and is difficult to teach those newer to the trade. In recent years, many companies have switched to a single roll beading expander, eliminating the need for hand beading. Not only does this reduce the amount of time it takes to roll and bead a vessel, but it's much easier for operators to use and get trained on. These types of innovative changes or improvements can be extremely beneficial for boosting job productivity, as well as, reducing labor and tooling costs. Lastly, this improvement in ergonomics can lower employee turnover, reducing the amount of time and money spent on hiring.

3. Lower Job Costs

Employee training programs can also reduce job costs and improve overall productivity. In addition to incorporating newer technology, trainings also help reinforce industry best practices. While each facility has different processes for how work is carried out, there are universal principles that can reduce job costs. For example, understanding proper set-up steps can reduce the amount of time required for the job and the amount of tooling required. This was exemplified in a recent training where the customer was retubing a heat exchanger. They ordered a huge supply of pulling spears, but their team wasn't trained on using anti-seize lubricant and proper sizing for spears, resulting in more money spent on the job. Now armed with this knowledge, they can lower future job costs, increase tool life, and improve productivity.

Overall, training programs can benefit to all organizations, especially, those in competitive markets. From improving operator retention, boosting productivity, and cutting job costs, training is a great investment to ensure your staff is up to date on all the latest industry practices.

1500 Series

Flaring Boiler Expanders

Tube Size

- 1.750" to 4.000" OD
- (44.5 to 101.6mm) OD

Type

Flaring Boiler Expander

Application

• Firetube & Watertube Boilers

Elliott's 1500 Series Flaring Boiler Expanders are self-feeding, specifically made for use in firetube and watertube boilers.

The 1500 Series Expanders are manufactured from high quality tool steels to assure for long life under the toughest of conditions.

Features & Benefits:

- Most commonly used expander in installation of new boiler tubes due to its solid design and self-feeding rolling operation.
- High quality steel for the most demanding water tube boiler applications.
- Roll retainers hold the rolls in place when changing mandrels.

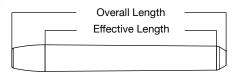

Mandrels are sold separately so users can choose from among a variety of mandrels best suited for their needs. Be sure to select a mandrel from the Spares & Accessories section below.

- Drum Mandrel: 10-1/2" (266.7mm) to 17-1/2" (444.5mm) long.
- Header Mandrel: For reaching through a header or water leg.
- Short Mandrel: 6-1/4" (158.8mm) long. May require two or more mandrels to obtain full expansion range of the expander.
- Roll Set: Consists of two each expanding roll, flaring roll, overlapping roll, and one set of roll retainer pins.
- Tube Rolling Lubricant See page 19 for part numbers.

3400 Series

Flaring Boiler Expanders

Tube Size

- 1.500" to 4.000" OD
- (38.1 to 101.6mm) OD

Type

Flaring Boiler Expander

Application

• Firetube & Watertube Boilers

Elliott's 3400 Series Flaring Boiler Expanders are the recommended tube expanders for flaring tubes in watertube and firetube boilers.

The prong style collar allows for uniform flare lengths as well as torque controlled tube rolling to obtain uniform expanded joints.

The 3400 Series Expanders are manufactured from high quality tool steels to assure for long life under the toughest of conditions.

Features & Benefits:

- Prong style thrust collar uniform flare lengths without risk of driving flare rolling into tube sheet.
- High quality steel for the most demanding boiler applications.

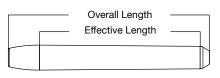

Mandrels are sold separately so users can choose from among a variety of mandrels best suited for their needs. Be sure to select a mandrel from the Spares & Accessories section below.

- Drum Mandrel: Most commonly used mandrel. Best used when tube sheet is readily accessible to operator. 9-5/8" (244.5mm) to 17" (431.8mm) long.
- Header Mandrel: For reaching through a header or water leg. 18" (457.2mm) to 25" (635.0mm) long.
- Short Mandrel: Used in place of Drum Mandrel when working in tight areas or where tube bends too quickly.
 May require two or more mandrels to obtain full expansion range of the expander. 6-1/4" (158.8mm) long.
- Roll Set: Consists of (3) expanding rolls, (3) flaring rolls, and (6) roll retainer pins.
- Tube Rolling Lubricant See page 19 for part numbers.

3400 Series Flaring Boiler Expanders

3300 Series

Straight Boiler Expanders

Tube Size

- 1.500" to 4.000" OD
- (38.1 to 101.6mm) OD

Type

Straight Boiler Expander

Application

 Firetube & Self-Contained Steam Boiler Units

Elliott's 3300 Series Straight Boiler Expanders are the preferred tube expanders for firetube boilers and self-contained steam boiler units.

The standard expanders are provided with thrust collars for rolling tubes flush to the tube sheet. Prong style collars are also available for tube ends extending beyond the tube sheet face.

Features & Benefits:

- For performing a straight roll operation or re-rolling leaky ioints.
- Ball bearing thrust collar prevents force feed of expander into tube.
- High quality steel for the most demanding boiler applications.

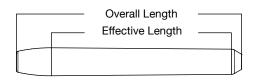

Mandrels are sold separately so users can choose from among a variety of mandrels best suited for their needs. Be sure to select a mandrel from the Spares & Accessories section below.

- Drum Mandrel: Most commonly used mandrel. Best used when tube sheet is readily accessible to operator. 9-5/8" (244.5mm) to 17" (431.8mm) long.
- Header Mandrel: For reaching through a header or water leg. 18" (457.2mm) to 25" (635.0mm) long.
- Short Mandrel: Used in place of Drum Mandrel when working in tight areas or where tube bends too quickly.
 May require two or more mandrels to obtain full expansion range of the expander. 6-1/4" (158.8mm) long.
- Roll Set: Consists of (3) straight rolls and (6) roll retainer pins
- Tube Rolling Lubricant See page 19 for part numbers.

DRE SeriesDeep Roll Boiler Expanders

Tube Size

- 1.750" to 4.000" OD
- (44.5 to 101.6mm) OD

Type

• Deep Roll Boiler Expander

Application

 Steam & Mud Drums in High Pressure Boilers

Elliott's DRE Series Deep Roll Boiler Expanders are used for deep and hard rolling of steam and mud drums found in high pressure boilers.

The DRE Series Expanders are furnished with a minimum reach of 3-1/2" (88.9mm) to maximum reach of 10-1/2" (266.7mm).

The DRE and 1500 Series Boiler Expanders make a great combination for boiler tube erection and boiler tube replacement.

Features & Benefits:

- Long expanding rolls allow for a quicker & easier steprolling operation.
- For use in heavy drum thicknesses for rolling tubes. With a reach up to 10-1/2" it ensures that any required reach or depth is easily performed with this tool.
- High quality steel for the most demanding water tube boiler applications.

Mandrels are sold separately.

- Header Mandrel
- Roll Set: Consists of (3) overlapping rolls and (6) roll retainer pins.
- Tube Rolling Lubricant See page 19 for part numbers.

*Effective Roll Length: 2-5/8"

40 Series

Straight Boiler Expanders

Tube Size

- 2.000" to 3.000" OD
- (50.8 to 76.2mm) OD

Type

• Straight Boiler Expander

Application

 Re-Rolling Leaky Tubes in Firetube Boilers By Hand

Elliott's 40 Series Straight Boiler Expanders are recommended for re-rolling leaky tube joints in firetube boilers. Self-feeding, these expanders should primarily be used by hand.

The guard prong is 1/2" (12.7mm) long, allowing you to roll boiler tubes with a projection, while also controlling the mandrel feed to prevent over-rolling.

The bronze bearing between the expander's frame and guard reduces friction and allows for torque controlled tube rolling.

Features & Benefits:

- Only for re-rolling leaky tube joints in firetube boilers.
- Tapered expansion aggressively seals leaky joints allowing for quick cycle time.
- Guard prong accommodates tube projections, allowing you to roll boiler tubes with projection while controlling the mandrel feed.
- An economical, durable tool.

Mandrels are sold separately.

- Drum Mandrel
- Roll Set
- Tube Rolling Lubricant See page 19 for part numbers.

UNIQUE APPLICATIONS REQUIRE CUSTOM SOLUTIONS

Take On The Toughest Applications With Custom Engineered Solutions.

With over 130 years of developmental experience, Elliott's in-house engineering team designs custom solutions for some of the industry's most unique applications.

Past Projects Include:

- 24' Condenser Expander
- U-Joint One-Revolution Cutter
- Baffle Expanders
- & Much More!

Keller & Associates Inc. Finds

The Best Bead In The Market

QUICK SUMMARY

The Challenge

- Provide the best quality work for their customers.
- Air hammer and beading tool were too labor intensive.
- Existing vendor's beading expander did not provide a smooth bead to tube sheet transition.
- Poor support from their existing vendor left them with little options.

The Solution

 Operators tested Elliott's 4480 Single Roll Beading Expander on a production job.

The Results

- Produced a smooth bead to tube sheet transition.
- Saved labor costs compared to manual beading.
- Extended tube life compared to a ridged bead transition.

The Challenge

As Operations Director of Keller & Associates Inc., a boiler contractor and repair shop in Lakeland, Florida, Ted Keller wants retube tools that will do the best job for his customers while minimizing time and costs on his end.

A roll beading expander that will roll, bead, and reroll the tube in one operation is an important tool for firetube boilers.

Keller & Associates' operators tried using an air hammer with beading tool but found that it was very time consuming since the three separate operations of rolling, beading, and re-rolling were required. Additionally, the air hammer was very hard on the body, making operators sore after just a few tubes.

Then they tried a single roll beading expander manufactured by a competitor of Elliott Tool. While the expander performed the three operations of roll, bead, and re-roll in only one function, thus saving time and labor costs, it did not produce a smooth bead to tube sheet transition. In fact, the bead had an evident lip (edge) on it.

A lip on the bead restricts the flame that is going through the firetube boiler tube which places stress on the tube. This stress decreases tube life which means that customers must get their firetube boilers retubed more often than they should need to.

Ted Keller actually called the single roll beading expander manufacturer to improve the quality of their bead since they want to do the best quality work for their firetube boiler customers. The manufacturer responded that they were working on the problem but Ted Keller never heard back!

The Solution

The Keller & Associates operators tried Elliott's Single Roll Beading Expander and immediately appreciated its key features:

- Rolling and beading in one operation together with fast feeding boosts productivity.
- Easy on body compared to air hammer and beading tool.
- Eliminates the high torque requirement of others' Double Roll Beading Expanders.
- Only minimal component part changes to enable expansion of different tube gauges.
- Smooth bead to tube sheet transition to increase tube life.

Although Keller & Associates were extremely pleased with all of the above features, they were most impressed with the smooth bead to tube sheet transition that Elliott's Single Roll Beading Expander produced.

In fact, Keller & Associates employees, including Ted Keller, did a side by side beading test using the Elliott expander versus the other manufacturer's expander on the same firetube boiler. All agreed that Elliott's Single Roll Beading Expander clearly provided for a better bead than the other beading expander.

Ted Keller was impressed to see that Elliott's Single Roll Beading Expander solved the problem that he was experiencing with his current roll beading

Like the smooth bead to tube sheet transition because it eliminates stress on the tube to make it last longer. I have been asking another roll beading expander manufacturer to improve the quality of their bead and they said they're working on it.

- Ted Keller, Operations Director

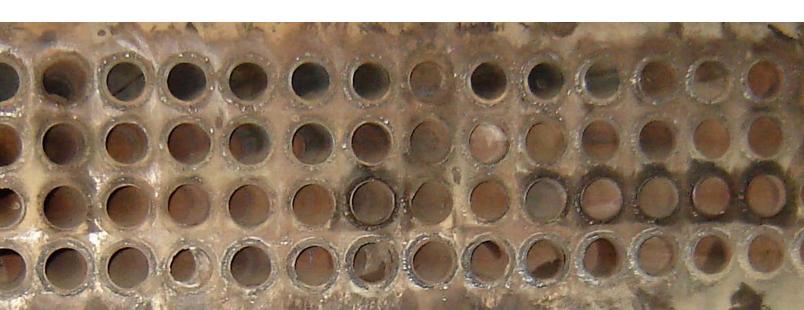

expanders so that he could provide the best quality to his customers.

The Results

Elliott's Single Roll Beading Expander saves Keller & Associates on labor costs as compared with the manual method of using an air hammer and beading tool which takes three operations instead of one.

The Elliott Single Roll Beading Expander also produces a smooth bead to tube sheet transition as compared with the other single roll beading expander manufacturer. The smooth bead allows firetube boiler tubes to last longer than those with ridged beads.

Keller & Associates knows that with the Elliott Single Roll Beading Expander, they are providing the best quality to their customers.

4480 Series

Single Roll Beading Expanders

Tube Size

- 1.500" to 3.000" OD
- (38.1 to 76.2mm) OD

Type

 Single Roll Beading Expander

Application

Firetube Boilers

Elliott's 4480 Series Single Roll Beading Expanders expand the tube into the tube sheet while forming a bead at the end of the tube required in firetube boiler applications.

The 4480 Series combines three operations (rolling, beading, re-rolling) into one, saving significant time and money. Additionally, the single beading roll design enables standard motors to provide enough torque to successfully bead the tube.

Features & Benefits:

- Rolling and beading in one operation together with fast feeding boosts productivity.
- Easy on body compared to air hammer and beading tool.
- Eliminates the high torque requirement of other Single Roll Beading expanders.
- Smooth bead to tube sheet transition: increases tube life.
- Only minimal component part changes to enable expansion of different tube gauges.

4480 Serie Package Includes:

- Roll Beading Expander
- Mandrel
- · Grease Gun

Spares & Accessories:

- Mandrel
- Front Square Drive Mandrel: Recommended in applications where space is limited and tubes must be re-rolled from behind the boiler
- Expanding Roll Set: Includes 3 or 4 overlapping rolls (depending upon expander size) and 1 expanding roll
- Guide Roll
- Bead Roll
- Grease Gun (4480-20-26) / Grease (4480-20-30)
- Bead Coolant See page 19 for part numbers.
- Electric and Pneumatic Rolling Motors See page on page 60 and 70.

We have used Elliott's single roll beading expander on two different retube projects so far and the finished look of the tube bead is machine quality. Our boilermakers said this was the best tool they have ever used. They will never pick up a pneumatic hammer and beading tool again!

-Burgess J. Holt, Owner NBW Inc

Heat Exchanger & Condenser Expanders

Tube Size

- 0.250" 0.375" OD
- 6.4 mm 9.5 mm OD

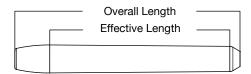

Elliott's 23 Series Condenser Expanders are ideal for expanding small tubes commonly found in oil coolers and other small heat exchangers.

The 23 Series Expanders are available in both standard and longer reaches to suit your application. The 23 Series works great with Elliott's new ET720 Series Rolling Motors. With quality US manufacturing and proven tool life, the 23 Series consistently expands tubes in smaller vessels.

Spares & Accessories:

- Mandrel
- Roll Set
- Lubricant: See page 19 for part numbers.
- ET Series Torque Controlled Pneumatic Rolling Motors: See page 64.

Elliott Tool Technologies To Support Metal Finishing Sales

DAYTON, OH – December 5, 2023 – Over the past several decades, Elliott Tool Technologies and Monaghan Tooling Group have partnered together to provide quality precision metal finishing tools for burnishing, mechanical joining, and internal recessing in a variety of applications. Elliott has provided engineering expertise and manufacturing of these tools with Monaghan providing the sales, application, and marketing support for customers. We are pleased to announce that Elliott and Monaghan have made a mutual decision to transition the sales and marketing process and fully integrate it into Elliott Tool Technologies,

effective January 1, 2024. Elliott has and will continue to provide the quality engineering and manufacturing you've come to expect, and will now be providing the sales, application, and customer support.

Monaghan's commitment to quality and customer service has laid a strong foundation for us to build upon. Elliott is grateful for their contributions, and you can trust that our dedicated team will work diligently to ensure a seamless transition.

Heat Exchanger & Condenser Expanders

Tube Size

- 0.500" 2.000" OD
- 12.7 mm 50.8 mm OD

Proven tool life from the inventor of the tube expander.

Elliott's 24 Series Condenser Expanders are ideal for expanding tubes in chillers, heat exchangers, feedwater heaters, fin fan coolers, and surface condensers.

The 24 Series Expanders are available in both standard and longer reaches. Additionally, Elliott offers 4 and 5 roll expanders for rolling thin wall stainless steel tubes and titanium tubes.

24 Series Expander Offerings:

| 3 Rol | ll Expanders | 44 |
|--------|--|----|
| 3 Rol | II 8" Reach Expanders | 46 |
| 3 Rol | Il 12" Reach Expanders | 48 |
| 4 & 5 | Roll Expanders | 50 |
| 4 & 5 | Roll Expanders With Nylon Pilot | 52 |
| 5 Rol | Il 8" & 12" Reach Expanders | 53 |
| Contac | ct Elliott for Specialty or Extended Reach Expanders | |

Spares & Accessories:

- Mandrel
- Roll Set
- Collars: See page 43.
- Lubricant: See page 19 for part numbers.
- Rolling Motors and Torque Controls: See page 60.

"Elliott's 24 Series Tube Expanders have excellent tool life. They held consistent rolled ID numbers and are easy to adjust. I'm purchasing more immediately."

Jim Damon, Lean Manufacutring Engineer

To read Jim's story and see more results reports, go to www.elliott-tool.com/24-series/results-reports/

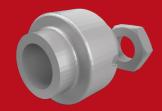

Elliott offers several types of collars for the 24 Series Condenser Expanders to accommodate all of your tube expansion job requirements.

| Application | Collar Type | Other Information | |
|---|--------------------|---|----|
| Roll tubes flush with tube sheet. | Flush Collar | This is the standard collar furnished with the 24 Series. | |
| Roll tubes that extend a uniform distance beyond tube sheet. | Recessed Collar | Elliott will recess collars to your requirements in depth increments of 1/64" each. | 35 |
| Roll tubes that extend at irregular distance beyond tube sheet. | Telescoping Collar | The end of the collar butts against the sheet thus maintaining a constant depth roll in the sheet without thrusting against end of tube. | |
| Roll thin wall tubes flush with tube sheet. | Thin Wall Collar | Thin wall insert fits inside of the thin wall collar housing to prevent the thin wall tube from being drawn into the collar during expansion. | |
| Roll air cooler tubes through a header or channel box. | Collar Ring | Elliott's patent pending collar ring prevents the expander from getting pulled into the plug hole and damaging threads or scratching the gasket seat. | |

Custom collars available upon request.

Coming Soon All New Jam Nut Style Collars

Elliott's standard collar will now feature a Jam Nut Style design. Optional collar kits are available for purchase during the transition.

US Fabricator Cut Costs & Boosted Quality

With The 24 Series Expander

QUICK SUMMARY

The Challenge

- · Provide a quality product to customers on time while controlling costs.
- Producing custom sized rolls to fit their application leads to inconsistencies in product.
- Halting production due to frequent tool breakage.

The Solution

• Tool life trial to compare Elliott's 24 Series to current expander.

The Results

- The 24 Series increased performance enough to yield a 10% savings in labor time and costs.
- Significant increase in tool life and ease of use, reducing rework and hassles.

The Challenge

A major US fabricator provides a full range of heat transfer products and services. A large part of their business is providing, manufacturing, and servicing of heat transfer vessels such as heat exchangers, condensers, and feedwater heaters. Producing a quality product in a timely manner for customers is one of the company's primary objectives.

In order to save time and money while still ensuring satisfying results, operators need the right tool for the job and that tool must be able to last. Jim Damon, as a Lean Manufacturing Engineer, understands this statement, as he can personally relate to the challenges involved with using a tool that is not right for a particular job.

Jim and his team's current condenser expanders have rolls, which need to be customized by grinding them down in order to obtain the effective roll length required for their application. Jim was using a 5 roll expander without a thin wall collar. However, the rolls are not precisely machined, as the amount removed varies. giving different effective roll lengths even on the same expander. The lack of a thin wall collar can cause the tube to become jammed in the tube expander's flush thrust collar. Jim and his team also report expansion inconsistencies using these expanders. Due to the poor quality of the customizations, the rolls would constantly fall into the cage ID and get stuck. The operator constantly has to fix this.

In addition to using expanders whose quality could not match their needs, Jim and his team continually wanted an expander that could last longer and reduce their need for frequent replacement expanders or spare rolls and mandrels. The constant hassles, extra work, and rework were costing Jim and his team extra time and extra money. They were not satisfied with their current tools and were ready to make a change.

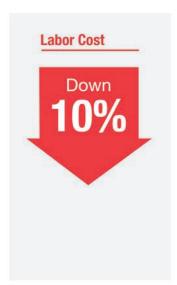

The Solution

Jim Damon and his team tested Elliott's new 24 Series Condenser Expanders on a nuclear power plant heat exchanger with titanium grade 2 welded tubes.

Benefits of Elliott's 24 Series

Key results achieved during tool life trial

Elliott supplied a 24 Series condenser expander with nylon pilot, 5 rolls, and a thin wall collar. Jim and his team performed a side-by-side test of Elliott's 24 Series Expander versus the current expander brand they were using. During the 2-day visit, the operators expanded approximately 1,300 tube ends. Three expanders were used, and interchanged every ~30 tubes to keep them cool, clean, and lubricated.

Their initial impression of the expander and its design was extremely positive. They liked the design with the nylon pilot as well as the thin wall collar because of added protection from tube scoring and jammed cages. Jim noticed the quality rolled joint from the 24 Series, and the target ID was hit accurately and consistently. The consistent numbers and impressive ease of use were Jim's favorite aspects of the Elliott brand expanders.

Jim and his team were very pleased to discover that the 24 Series Expanders resulted in a highly superior expansion and increased tool life. Just a few of the great benefits Jim experienced were:

- Quality rolled joints.
- Decreased labor time, thus lower costs.
- · Minimal hassle using thin wall collars.
- Less downtime with much faster, more efficient cleaning.

After using Elliott's 24 Series, Jim found which tool he preferred. With the inconsistencies in the expansions and the constant hassle of fixing the stuck rolls gone, a winner was decided.

The Results

With Elliott's 24 Series, this fabricator experienced a significant increase in tool life and ease of use, which reduced rework, hassles, and improved productivity. Also, the nylon pilots greatly helped eliminate tube scratches. These benefits mean significant cost savings for them by switching to the 24 Series from their current expanders.

In terms of specific results for Jim and his team, the 24 Series increased performance enough to yield a 10% savings in labor time. Equally, this translates to an impressive 10% savings

in labor costs as well. This was directly caused by the eliminated time spent with replacing broken tools or reworking expansions. Essentially, the operators were able to work through continuously without having to stop and deal with hassles and problems.

Based on early results, increased tool life should cut tooling costs by about 35%. In addition to using less tools to complete the job, there is also increased productivity due to less time being spent on replacing tooling or removing broken tooling from the tube.

Jim Damon and his team were highly satisfied with the tool life and consistency of Elliott's 24 Series Condenser Expanders. Overall, he is now certain that the 24 Series is the superior tool, and he prefers Elliott's expanders to any others.

- Elliott's 24 Series Tube Expanders have excellent tool life. They held consistent rolled ID numbers and are easy to adjust. I'm purchasing more immediately.
 - Jim Damon, Lean Manufacturing Engineer

Sugar Mill Vacuum Pan Expander

Tube Size

- 3.000" to 4.000" OD
- (76.2 to 101.6mm) OD

Elliott's 6621 Series Sugar Mill Vacuum Pan Expanders are ideal for the fabrication and re-tube of sugar mill vacuum pans.

They are operated from the top and eliminate the cumbersome and dangerous task of expanding the bottom tube sheet from underneath the pan. The 6621 Series Expanders also remove the need to purchase several short mandrels required for bottom tube sheet expansions.

6621 Short Expander Assembly For Rolling Top Sheet.

6621 Long Reach Expander Assembly For Rolling Bottom Sheet From Top Sheet.

Features & Benefits:

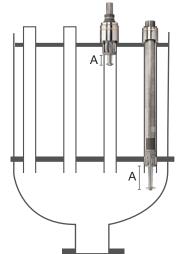

- · Easy assembly and disassembly.
- Range for reach adjustment of up to 12" (304.8mm).
- · Pin and washer mandrel retention.
- Through-hole for vertical suspension (fits standard "D" rings).
- Double radius rolls to avoid sharp edges on rolled area.
- Operator Friendly: less operator fatigue, safer than rolling from bottom.
- · Less time resulting in significant labor cost savings.

6621 Series Sugar Mill Vacuum Pan Expander includes:

- Expander Assembly
- Cage Extension
- Mandrel Extension
- Mandrel Guide
- Square Socket
- 3 Set Screws

- Extension Set: Includes 1 Cage Extension, 1 Mandrel
 - 1 Mandrel Guide, 1 Square Socket, and 3 Set Screws
- Roll Set
- Mandrel

Sugar Mill Vacuum Pan Expander

Tube Size

- 3.000" to 4.000" OD
- (76.2 to 101.6mm) OD

Elliott's 3321 Series Sugar Mill Vacuum Pan Expanders are the ideal expanders for re-rolling tubes in vacuum pans.

The 3321 Series Expanders can be used with short series mandrels for rolling in confined spaces.

Features & Benefits:

- For performing a straight roll operation or re-rolling leaky ioints.
- Ball bearing thrust collar prevents force feed of expander into tube.
- High quality steel for the most demanding applications.

Mandrels are sold separately

- Short Series Mandrel: 6-1/4" (158.8mm) OAL with 1" (25.4mm) square drive. Both mandrels are required for the selected wall gauge.
- Roll Set

| Tube OD Size | BWG | Expansion Range | Expander Assembly | **Roll Set | Drum Mandrel* | Short Mandrels | Weight | | |

^{*} Mandrels must be purchased separately.

^{**} Roll Set includes 3 rolls and 6 roll retainer pins.

Collet Style Support Sheet Expanders

Tube Size

- 0.750" to 1.000" OD
- (19.1 to 25.4mm) OD

Elliott's Collet Style Support Sheet Expanders are used with a handheld short stroke hydraulic ram and lightweight, low-pressure hydraulic pump to support sheet expand finned or prime surface tubes commonly found in chillers. Suitable only for soft materials such as copper. Not suitable for all chiller applications, i.e. Duplex chillers which require rolled joints in a center tube sheet.

Elliott offers two rental packages for %" (19.1mm) and 1" (25.4mm) tubes.

Features & Benefits:

- Expands copper tubes in support sheets in seconds.
- · Modular design allows for easy transport and storage.

Collet Extensions

| Collet Style Support Sheet Expanders | | | | | | | | | |
|--------------------------------------|--------------------------------------|-------------|----------------------|------------------|--|--|--|--|--|
| Tube OD | Expansion Range | Rental Kit | Expander Part Number | Short Stroke Ram | | | | | |
| 3/4" (19.1mm) | 0.530" - 0.687" (13.46 - 17.45mm) | RXB9765PKG | B9765A00 | M5700 00 | | | | | |

Electric Rolling Motors

Tube Size

- 0.250" to 3.000" OD
- (6.4 to 76.2mm) OD

Always on, always precise.

Electricity offers better consistency when rolling tubes and is more readily available than air. However, in the past, pneumatic rolling motors have offered higher RPMs and torque. Elliott is redefining the electric rolling motor with the 99 Series. Now, faster RPMs and comparable torque to pneumatic offerings are possible.

The dual speed option offers a new level of flexibility when rolling across various applications. The low speed setting offers increased torque for demanding applications while the high speed setting allows for greater speed and productivity.

To complement the 99 Series Electric Rolling Motors, Elliott offers the best electric torque controller in the market, the ELC110220. Job setup is 2 to 3 times faster and allows you to roll to the target ID each time so that costly re-rolls are eliminated.

Features & Benefits:

- More consistent and convenient than pneumatic rolling motors
- High RPMs for faster job completion.
- Dual speed: High gear for greater speed and productivity, low gear for high torque applications.
- Lightweight, balanced ergonomics for decreased operator fatigue.
- Ready for immediate use with the best electric torque controller in the market, Elliott's ELC110220.

- ELC110220 Electric Torque Controller. Required when using Elliott's "-7P" auto-reversing motors. See page 62 for more information.
- Motor Adapter Cord: See page 209 for more information.

Electric Torque Controller

Job setup 2 to 3 times faster.

Elliott is pleased to introduce its ELC110220 Electric Torque Controller – the first torque control with an Embedded Logic Controller that senses and is compatible with both 110V and 220V and automatic and manual reverse rolling motors.

Setup is easy and two to three times faster, even for inexperienced operators. You can choose one of three modes: automatic, assisted, or manual to suit your individual rolling needs.

Whereas other competitors require two or more torque controls to accommodate different rolling motors or voltages, the ELC110220 can be used with auto or manual reverse motors, 110V or 220V. No more worrying about which controller or motor to bring to the job site because the ELC110220 is all you need!

Additionally, the torque controller is CE Mark and UL & RoHS compliant for operator safety.

Electric Torque Controller

Features & Benefits:

- Job setup 2 to 3 times faster.
- Three setup modes to suit your needs.
- A single controller lowers your investment.

Specifications:

- Amperage: 20 Amps
 Hertz: 50 / 60 Hz
 Voltage: 100V to 240V
 Tolerance: +/- 40 milliamps.
- Temperatures: 0°F to 120°F. (-18°C to 49°C)
- Dimensions: 8" x 6.5" x 6.75". (20.3 cm x 16.5 cm x 17.1 cm)
- Weight: 3.6 pounds (1.6 kg)
- Supported Languages: English, Spanish

ELC110220 Electric Torque Controller includes:

- Electric Controller Unit
- 110V North American (Nema 5-15) Controller Power Cord

Spares & Accessories:

- Replacement Controller Power Cords
- Electric Rolling Motors: For use with the ELC110220
- Motor Adapter Cord: Detachable adapter cords to adapt an existing electric motor(s) to the ELC110220 controller's 7-pin connection. Each adapter cord will measure approximately 1 ft. [0.3M] long. Auto-reversing motors must be of Elliott Tool manufacture. Motor Adapter Cords are available in the following:
- 1.110V North American (Nema 5-15) Manual Reversing
- 2.110V North American (5-Pin Amphenol) Auto Reversing
- 3. 220V Continental Europe (Schuko) Manual Reversing
- 4. 220V Continental Europe (5-Pin Amphenol) Auto Reversing
- 5. 110V United Kingdom Manual Reversing

Contact Customer Service for other manufacturers' auto-reversing models.

ET Series

Torque Controlled Pneumatic Rolling Motors

Tube Size

- 0.250" to 1.250" OD
- (6.4 to 31.8mm) OD

The quality you need. The compatibility you want.

Elliott offers the ET Series for tube sizes 1/4" (6.40mm) to 1-1/4" (31.8mm) to suit your tube expansion needs.

The ET Series Motors are torque controlled and ideal for rolling tubes in heat transfer vessels, ranging in size from small oil coolers to large heat exchangers.

The ET Series Motors have undergone extensive testing, proving long tool life and quality. Parts are truly compatible with the original Airetool® motors for convenient maintenance of existing motors. Elliott also offers repair services for existing Airetool® motors.

Two series to suit your application

Both ET series use torque actuated cams to measure torque and provide consistent expansions each time.

ET720

See page 65

Ergonomic & lightweight design is ideal for rolling small tubes commonly found in oil coolers and other small heat exchangers.

- Tube OD Range: 1/4" 1/2" (6.4 12.7mm)
- Torque Range: 2 75 in lbs (0.23 8.5 Nm)

ET850

See page 66

Offering the same USA quality and performance you're used to with additional features to improve the operator experience.

- Tube OD Range: 3/4" 1-1/4" (19.1 to 31.8mm)
- Torque Range: 22 318 in lbs (2.5 35.9 Nm)

Torque Controlled Pneumatic Rolling Motors

The quality you need. The compatibility you want.

Fast and consistent method for rolling small tubes.

Lightweight & ergonomic design is ideal for rolling small tubes commonly found in oil coolers and other small heat exchangers.

These motors work great with Elliott's 23 Series expanders. Backed by US quality and proven tool life, the 23 Series and ET720 motors consistently expand tubes in smaller vessels.

Roll Every Tube To Spec

Ergonomic Handle Design

Consistent Tube Expansion

Roll Every Tube To Spec

Torque actuated cams accurately measure torque to provide consistent expansions each time.

Less Operator Fatigue

Lightweight aluminum core reduces operator fatigue.

Highly Durable

Rugged carbon fiber infused handle is designed to improve ergonomics and provide long tool life.

Operator Friendly

Ergonomic Design

Insulated handle doesn't get cold while you use it.

Easy To Use

Simply connect to the air supply, adjust torque, and start rolling.

Spares Kit Includes:

- Paddle Set
- O-Rings
- Radial Ball Bearings

Accessories:

- 1/4" Quick Change Chuck, ET720-025-037
- 3/8" Quick Change Chuck, ET720-037-037
- Spares Kit
- Filter-Lubricator, 6090

ET850 Series

Torque Controlled Pneumatic Rolling Motors

The quality you need. The compatibility you want.

The next generation of push pull motors.

Elliott's ET850 Motor is the next evolution of push-pull motors. Offering the same USA quality and performance you're used to, the compatibility you need, with additional features to improve the operator's experience.

A Motor You Can Count On

Roll Every Tube To Spec

Torque actuated cams measure torque to provide consistent expansions each time. Reference marks make it easy to roll to the same torque each time.

No Mess

Adjustable muffler port stays where you point it, keeping oil from getting on the operator.

Multi-Position Design

Multi-position muffler works as a handle and allows the operator to easily hold the motor in three different positions, left, right, and underneath.

Operator Friendly

Reduce Fatigue

An eye-bolt allows the operator to easily connect to a counterbalance, reducing fatigue.

Easy Setup

Includes quick disconnect air fitting to get the motor up and running quickly.

Spares Kit includes:

- Paddle Set
- Trip Spring
- Radial Ball Bearing
- O-Rings

Accessories:

- 1/2" Quick Change Chuck, 810-050-037
- 3/8" Quick Change Chuck, 810-037-037
- Spares Kit
- Filter-Lubricator, 6070

Torque Controlled Pneumatic Rolling Motors

Tube Size

- 0.750" to 2.000" OD
- (19.1 to 50.8mm) OD

Elliott offers the Midi/Maxi[™] Series for tube sizes 0.750" (19.1mm) to 2.000" (50.8mm) to suit your tube expansion needs.

The Midi/Maxi Series Pneumatic Rolling Motors are actually back by popular demand! Numerous customers requested that the Midi/Maxi Series be brought back, claiming they were the best motors on the market. These motors are manufactured with quality materials to provide motor robustness and durability for years. The Midi/Maxi Series Pneumatic Rolling Motors will last for years to come – they are so durable that they can survive for as long as thirty years or more.

Features & Benefits:

- Designed for maximum durability with heavy duty planetary gearing, roller and ball gearing construction, and Heli-Coil inserts.
- Customer proven that motors can survive for thirty years or longer.
- Exhaust hose, motor speed, and compact design provide increased operator satisfaction.
- High torque consistency reduces costs associated with rework.

Midi/Maxi Series Package includes:

- Torque Controlled Pneumatic Rolling Motor
- 16 oz. Can Lube Oil
- 7-1/2' Air Hose Whip
- Carrying Box
- Exhaust Hose Assembly
- Filter-Lubricator
- Hose Adapter
- Muffler Unit
- Quick Change Chucks
- Side Handle

^{*}Tube size range may vary due to tube wall thickness, material, tube sheet thickness, lubrication, operation condition, and/or operator technique.

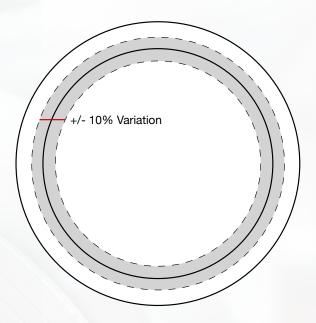

Minimum Wall Tube

When ordering tubes, it is very unlikely that each wall thickness will be exactly the same. Industry tolerances allow for ±10% thickness. That's a total variation of up to 20% from the smallest to largest thickness, resulting in a wide range of sizes. For example, if you have .083" average wall tubes, the actual wall could be anywhere between .091" and .075". If you were to buy a 14 BWG expander to fit .083, it would likely still work for either extreme due to the expansion range that the tool is capable of achieving.

However, many times a heat exchanger manufacturer needs to achieve a very specific thermal transfer. In order to achieve this, they need to guarantee that the wall thickness of the tubes will be a minimum thickness. So for many applications, the manufacturer will request minimum wall (min wall) tubes.

A min wall tube offers the same total variation in wall thickness that an average wall tube does, but the variation is applied differently. It allows for -0% and +20%. So the wall will never be less than the specified thickness. For example, a .083" min wall tube will range from .083" to .100" wall thickness.

Average Wall Tube

At the upper end of that range, a normally sized tube expander will not have enough clearance to enter the tube. If you have min wall tubing, it is recommended that you drop down one expander size. So instead of ordering a 14 BWG expander, you would drop down to a 13 BWG. This ensures that the expander will fit inside of the tubes and still achieve the proper range of expansion.

If you are unsure whether or not you have min wall or average wall tubing, it is important that you measure the inside diameter (ID) of your tubes prior to ordering tooling. If you do not take an average measurement, you may end up having to order additional sizes or spend time re-rolling tube joints later on. Taking ID measurements are always recommended, even if you know what type of tubing you have. The more precision measurement you have, the more accurate you can be when ordering your tooling.

Overall, it is important to understand the difference between average and min wall tubing, and to know the type you are working with in order to achieve the best results.

445 SeriesRight Angle Pneumatic Motors

Tube Size

- 1.500" to 4.000" OD
- (38.1 to 101.6mm) OD

The quality you need. The compatibility you want.

Elliott offers the 445 Series Motors in both roll and lever throttle for tube sizes 2.000" (50.8mm) to 4.000" (101.6mm) to suit your tube expansion needs.

The powerful 445 Series Motors are ideal for tough boiler tube applications. The right angle heads are suited for rolling tubes in hard to reach, tight areas. Available in torque controlled & stall type motors.

The 445 Series Motors have undergone hundreds of hours of rigorous testing, proving tool life and ensuring quality. Motor parts are designed to truly be compatible with ${\sf Cleco}^{\circledR}$ and ${\sf Airetool}^{\circledR}$ motors, for convenient maintenance of existing motors.

Features & Benefits:

- Powerful for boiler tube expansion.
- High quality proven design for long-lasting tool life.
- Right angle head enables rolling in hard to reach or tight areas.
- Parts are truly compatible with Cleco® and Airetool® for convenient maintenance of existing motors.

Stall Torque Pneumatic Rolling Motors

Tube Size

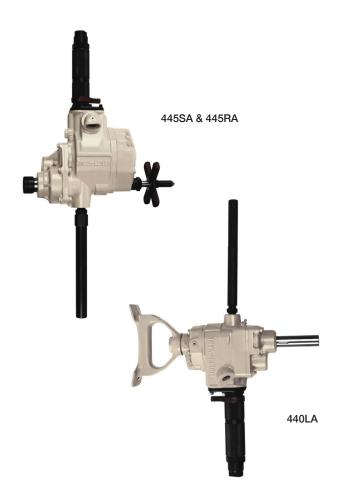

- 0.750" to 6.000" OD
- (19.1 to 152.4mm) OD

Elliott's Stall Torque Pneumatic Rolling Motors are the most powerful motors available for rolling tubes in extreme applications. The motors are recommended for use in heavy wall, thick drum applications in watertube boilers. 950 ft. lbs. of stall torque will expand any boiler tube with a wall thickness heavier than 8 BWG.

Features & Benefits:

• Ideal for expanding tubes with heavy wall thicknesses.

- 6080 Lubricator
- Morse Taper Adapters
- Sockets
- Chucks

Four series to meet demanding production schedules

Engineered with productivity and precision in mind, Elliott's assisted tube rolling systems complete the job right the first time. The Hawk's articulated arm supports the weight and absorbs the torque of the rolling motor using a pneumatic counterbalance, which allows the operator to effortlessly move the motor into position.

Table Hawk

See page 76

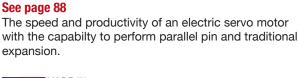

Designed to expand small tubes commonly found in oil coolers and other small heat exchangers.

suitable for Fab Shops & OEMs.

The speed and productivity of an electric servo motor expansion.

Offering true parallel pin rolling, with the power of a hydraulic motor and the control of an electronic system.

Assisted Tube Rolling Systems

Safe & Ergonomic

Supports Tool Weight

Pneumatic Counterbalance decreases operator fatigue by absorbing torque and allowing effortless positioning of the arm & rolling motor.

Effortless Positioning

The Articulated Arm increases operator ergonomics and decreases operator fatigue by supporting tool weight.

More Reach, Less Re-Adjusting Large radial reach increases productivity by allowing a large area of tubes to be rolled without re-adjusting the unit.

Built-in Safety Features

Safety Control Valve protects the operator by eliminating a sudden drop of the articulated arm in case of pneumatic air loss.

Works Great In Smaller Work Spaces Weighted Pedestal allows for convenient placement, even in a small workspace, with its compact design and small footprint.

Quick & Easy Setup

Get Up & Running Quickly

Fully assembled articulated arm minimizes setup time by arriving fully assembled.

Simple To Setup

Filter/Regulator & Lubrication allows for simple setup and decreases maintenance by extending the life of the pneumatic counterbalance.

Automatic Tool Lubrication

Lubrication Where It's Needed

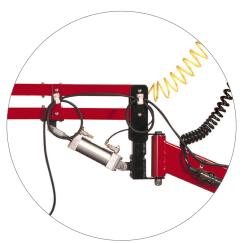

Through the cage Auto-Lubrication increases tool life by providing lubrication directly to the working end of the tool.

Automatically Dispenses

Reduces time wasted applying and cleaning up excess lubrication by providing a consistent amount of lubricant with each expansion.

More Consistent Expansions

Pressurized lubrication tank increases expansion consistency by providing a consistent flow of lubricant for a wide variety of lubricant viscosities.

Effortless Positioning

Built-in Safety Features

Supports Tool Weight

At Trane, we have an unceasing pursuit for improving our manufacturing processes. Having manufacturing partners that are equally engaged is essential to a sustainable future. Elliott Tool Technologies has embraced that role with swift response by leading and providing custom tool solutions to match our continuous improvement goals.

Max Ford, Manufacturing Engineer Trane Technologies, LaCrosse WI

TABLE HAWK™

Tabletop Assisted Tube Rolling System

Tube Size

- 0.250" to 0.625" OD
- (6.35 to 15.9mm) OD

Small tubes, high precision.

Engineered to productively and precisely expand small tubes commonly found in oil coolers and other small heat exchangers. Elliott's tabletop assisted tube rolling system completes the job right the first time.

Elliott's Table Hawk is the first tabletop system to offer the speed and productivity of a pneumatic motor with the precision and control of an electronic system. It maximizes productivity by providing best in class cycle times and eliminating costly rework from less precise methods.

Combining Elliott's patent pending Direct Torque™ technology with a pneumatically driven power head, operators simply set a torque and start rolling. The system monitors torque and provides consistently precise wall reductions for every expansion.

Ergonomically and productively roll smaller vessels easily. The Table Hawk's articulated arm supports the weight and absorbs the torque of the rolling motor using a pneumatic counterbalance, which allows the operator to effortlessly move the motor into position. The Table Hawk can be mounted to a table or wheeled cart.

TABLE HAWK™

Tabletop Assisted Tube Rolling System

Increased Productivity & Ergonomics

Start, Stop, & Reverse Automatically Auto-Cycling increases speed and precision with a Power Head that runs automatically –starting, stopping, and reversing without operator intervention.

Faster Motor, Same Precise Control Increase speed with a pneumatic motor and roll each tube to spec with the electronic control system.

Trigger-less Operation

Increases ergonomics with a simple on/ off switch for operation. No need to hold down a trigger during the entire job.

Articulated Arm

Increases operator ergonomics and decreases operator fatigue by supporting tool weight and absorbing torque.

Counterbalance

Decreases operator fatigue by allowing effortless and exact positioning of the articulated arm and rolling motor.

Change Tooling Quickly

Quickly change out Elliott's long-lasting 24 Series Condenser Expanders with the built-in quick change chuck system.

Quick & Easy Setup

Fully Assembled Articulated Arm Minimizes setup time by arriving fully assembled. Simply mount the arm to a tabletop or cart and connect the airlines.

Operator Friendly Controls

User simply sets torque with the easy-to-use control panel.

Filter/Regulator and Lubrication

Allows for simple setup of the Table Hawk and decreases maintenance by extending the life of the air motor.

Consistent Tube Expansion

Roll Every Tube To Spec

Direct Torque™ Electric Torque Control measures torque and controls system functions regardless of fluctuations in air supply. Allows you to roll to the target wall reduction each time to eliminate costly re-rolling.

Increase Tool Life

Swivel Mount securely supports the Power Head to ensure expander alignment and increase expander life.

Maintain Tool Alignment

Expander holder increases tool life and ensures consistently rolled tubes with an expander holder that guides the expander and maintains tool alignment.

Assisted Tube Rolling System

Tube Size

• 0.625" to 1.500" OD

Uncompromising consistency with faster productivity.

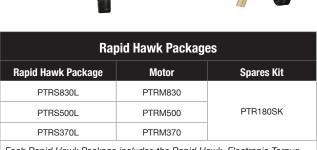

Elliott's Rapid Hawk is a first of its kind. Offering the speed and productivity of a pneumatic motor with the precision and control of an electronically controlled system. It maximizes productivity by providing best in class cycle times and eliminating costly rework from less precise methods.

Combining a pneumatically driven power head with Elliott's patent pending Direct Torque™ technology, operators simply set a target torque and start rolling. The system monitors torque and provides consistently precise wall reductions for every expansion.

The Hybrid Series takes ergonomics and productivity to a new level with trigger-less operation and auto-cycling. Simply turn the system on and it will start, stop and reverse without any operator intervention.

We have over 280,000 expansions on the Rapid Hawk, with the capability of 360 expansions per hour, with 0 tube joint leaks due to the system, and with 0 downtime.

> -Mark Chisum, Manufacturing Engineer Metalforms, Ltd.

Each Rapid Hawk Package includes the Rapid Hawk, Electronic Torque Control, Auto Cycle, Expander Holder, Through The Cage Auto-Lubrication, Rotary Lube Adapter, Expander Adapter, Pneumatic Power Head and Swivel Mount System.

Spares Kit includes:

- · Air motor spares kit
- · Cable cylinder spares kit
- Tie rod cylinder seal set
- 40 micron filter (air filter/regulator)
- Lubricator service kit (air motor lubricator)
- 5 micron filter (air motor filter/regulator)

Increased Productivity

Start, Stop, & Reverse Automatically Auto-Cycling increases speed and precision with a Power Head that runs automatically –starting, stopping, and reversing without operator intervention.

Faster Motor, Same Precise Control Increase speed with a pneumatic motor and roll each tube to spec with the electronic control system.

Zero Trigger Cycling

Trigger-less operation increases ergonomics with a simple on/off switch for operation. No need to hold down a trigger during the entire job.

Automatic Tool Lubrication

Through the cage Auto-Lubrication increases tool life by providing automatic expander lubrication exactly where it's needed, through the cage and directly to the rolls & mandrels. No messy cleanup by providing the right amount of lube with each expansion. See page 72 for more information.

Change Tooling Quickly

Quickly change out Elliott's long-lasting 24 Series Condenser Expanders with the built-in quick change chuck system.

Operator Friendly

Operator Friendly Controls

User simply sets torque with the easy to use control panel.

Modular Motor System

Purchase additional motors to quickly change between various torque and OD ranges due to the system's modular design.

Easy To Move

Heavy-duty casters, forklift pockets, and hoist ring, provide a variety of methods to easily move the system around facilities.

Consistent Tube Expansion

Roll Every Tube To Spec

Direct TorqueTM Electric Torque Control measures torque and controls system functions regardless of fluctuations in air supply. Allows you to roll to the target wall reduction each time to eliminate costly re-rolling.

Increase Tool Life

Swivel Mount securely supports the Power Head to ensure expander alignment and increase expander life.

Maintain Tool Alignment

Expander holder increases tool life and ensures consistently rolled tubes with an expander holder that guides the expander and maintains tool alignment.

Assisted Tube Rolling System

The Rapid Hawk's through the cage Auto-Lubrication system provides lubricant where it's needed most, to the rolls and mandrel. Most lubrication systems only provide lubricant through the collar, which is often positioned too far from the working end of the tool, especially when working with thicker tube sheets or header boxes. By providing the lubricant through a sealed cage, Elliott's revolutionary new design increases tool life and reduces time wasted applying and cleaning up excess lubricant.

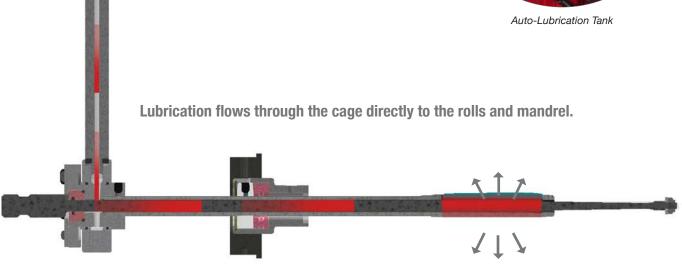

The Auto-Lubrication system is designed to work seamlessly with the Hybrid Series Rapid Hawk. Working in conjunction with the Auto-Cycle feature, the system will apply a consistent amount of lubricant during each expansion cycle. The amount of lubricant used for each expansion is easily adjustable and the system is capable of handling a variety of lubricant viscosities.

In order to allow for proper sealing of the cage for lubrication flow, a specially designed 24 Series expander is needed. However, when necessary, the Auto-Lubrication system can be turned off and any expander can be used with the Rapid Hawk.

Auto-Lubrication System With Expander Holder

Spares & Accessories

Spares & Accessories

- P8395 & P8784 Tube Rolling Lubricant: See page 19 for part numbers.
- Rotary Lube Adapter: Connects the expander cage to the lubrication system.
- Cage Adapter: Connects the expander cage to the rotary lube adapter. One included with the rotary lube adapter.
- Lube Spacer w/ O-ring: One included with each expander. Seals the mandrel and back of cage adapter.
- Expander Adapter: Holds the expander in the expander holder.
- Rapid Hawk Service Plan: Keep your Rapid Hawk in top operating condition, ensuring uptime and productivity.

Dunn Heat Exchanger, Inc Reduces Expansion Cycle Times by 80% With Parallel Pin Expansion

QUICK SUMMARY

The Challenge

- Current rolling motors were not providing a consistent and repeatable approach to tube expansion.
- Overheating required frequent tool changes, resulting in downtime.
- Manual tool lubrication for large jobs can extend job duration.
- Heavy handheld motors cause downtime due to operator fatigue and pose safety concerns.

The Solution

- Elliott's Ultra Hawk with the speed and productivity of an electric servo motor and the capability to perform parallel pin and traditional expansion.
- Production trials to determine joint consistency, cycle times, and operator ergonomic improvements.

The Results

- Cycle time savings of 80% per tube, from 22 seconds to 4 seconds.
- Through-the-cage auto-lubrication increased tool life 3:1 compared to using an 850 Rolling Motor.
- Zero tube leaks due to the system, reducing the number of man-hours attributed to re-rolling.
- Increased ergonomics provide a safer rolling method and reduced operator fatique.

The Challenge

Dunn Heat Exchanger, Inc., a fabrication company located in Texas City, Texas, offers heat exchanger cleaning, decontamination, repair, and fabrication services in the highly competitive shell and tube market. Offering services 24 hours a day, seven days a week, means that productivity and efficiency are key to offering the fastest turnaround time to customers.

One of the main challenges facing the team was the amount of time it took to complete a job. Using an 850-style push-pull motor with a traditional expander, it was easy to add days onto a job due to lower tool life, operator fatigue, and downtime.

Downtime and longer expansion cycle

times were largely due to frequent tooling change outs. Relying on a manual tool lubrication process, the operator would need to lubricate each tube prior to starting a job. However, this process was often not enough to prevent early wear and overheating of tools, resulting in extra downtime to change tooling.

Operator fatigue and safety was also a concern for the Dunn team. Holding a handheld motor requires the operator to support about 14 lbs. or more, while absorbing about 12 ft lbs. of torque during each tube expansion. "When doing tapered pin expansion, if the tool slipped from your hands after catching the ID of the tube, I have little doubt it could break someone's arm," said Pete Dunn Jr. President. Over a few thousand

expansions, fatigue can take over causing a slow down in productivity and increase safety concerns for operators.

With a desire to increase cycle times, acquire more jobs, and improve operator safety, the team at Dunn Heat Exchanger decided to collaborate with Elliott Tool Technologies to find a better solution.

The Solution

Elliott's new, truly complete rolling system, the Ultra Hawk, offers the speed and productivity of an electric servo motor with the capability to perform parallel pin and traditional expansion. Productivity is maximized through best-in-class cycle times and the need for rework is lowered by providing consistent, reliable expansion.

With the Ultra Hawk's parallel pin feature, you can see up to 2Xs the speed on cycle times. Parallel pin rolling also helps to reduce the force exerted against the tube and tube sheet, eliminating costly tube sheet damage and warping.

This system ensures every tube is rolled to spec through a measurement of torque and controls system functions which allows tubes to be rolled to the target wall reduction each time to eliminate costly re-rolling. Data output ensures customers that quality control metrics and customer requirements are met, and that the vessel will pass hydro.

After trialing the Ultra Hawk assisted rolling system, Dunn Heat Exchanger decided that the productivity and consistency of the system were exactly what they were looking for. Additionally, the ergonomics and easy set-up made the Ultra Hawk their desired method for tube expansion moving forward, as it didn't require any extensive training or experience to operate.

The Results

During a large job, Dunn expanded 1,889 SA179 ¾" x 14 BWG tubes to conduct a comparison test between traditional rolling with an 850-style motor and parallel pin rolling with the Ultra Hawk system. Dunn realized the benefits the Ultra Hawk offers almost immediately. An 850 motor was used to roll 300 tubes with traditional expansion, at a 22 second cycle time, using one operator. The Ultra Hawk was used to roll 1,589 tubes, parallel pin expansion, at a four second cycle time, with one operator.

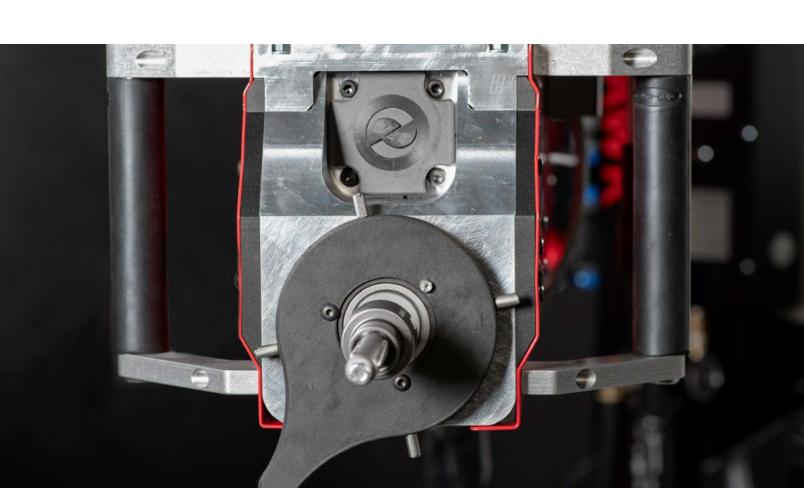

Dunn saw productivity increases not only in cycle times but also in tool life, with a 3:1 increase using the Ultra Hawk, versus a handheld motor with traditional rolling. Expansion consistency also increased with parallel pin, and the Ultra Hawk's ability to measure torque resulted in no leaks at hydro. This is compared to the one leak of the 300 tubes rolled with traditional expansion using the 850 motor.

The ergonomics and safety of the system also had a positive impact on operators. "The torque of a push\pull certainly contributes to operator fatigue, but they can also be dangerous. Other designs on the market have a mounted roll motor located behind the operator with a rotating shaft that passes underneath the operator's arm. As you can imagine that shaft has the possibility of causing a major injury should someone's clothing or skin get caught," said Pete Dunn Jr. The pneumatic arm of the Ultra Hawk absorbs the weight and torque of the motor, reducing the risk of injury and fatigue on the job.

Overall, the Ultra Hawk system has helped Dunn realize the benefits of parallel pin expansion and how the system can provide a consistent and repeatable approach to tube expansion. As Pete Dunn Jr. explains, "with the speed increase of the new machine, I don't really see a reason to use tapered pin expansion on new fabrication anymore."

With the speed increase of the new machine, I don't really see a reason to use tapered pin expansion on new fabrication anymore.

-Pete Dunn Jr., President, Dunn Heat Exchanger

Assisted Tube Rolling System

Tube Size

- 0.625" to 1.500" OD
- (15.9 to 38.1mm) OD

capability to perform parallel pin and traditional expansion. cycle times and eliminating costly rework from less precise methods.

Experience the flexibility and speed of parallel pin rolling with the simple flip of a switch. True parallel pin rolling can reduce the stress created on welded tube joints compared to tapered rolling, making it ideal for certain applications.

The Ultra Hawk's articulated arm supports the weight and absorbs the torque of the rolling motor using a pneumatic counterbalance, which allows the operator to effortlessly move the motor into position.

Experience The Savings

The Ultra Hawk is the market's first truly complete system, guaranteed to save 30% in your tube expansion process.

A few ways you can save:

- · Lower Maintenance Cost
- Faster speed and cycle times with parallel pin
- Ability to complete job requirements for both tapered pin and parallel pin
- Reduced labor, training, and set-up costs

Assisted Tube Rolling System

Operator Friendly

Automatic Tool Lubrication

Increased Productivity

Servo Motor Technology

Equipped with the same proven electric servo motor technology used in CNC machines for decades. It reduces maintenance costs, while improving speed and durability.

Roll Traditional & Parallel Pin Change between parallel pin and traditional rolling with the push of a

button.

Lower Operating Costs

Experience up to 50% energy savings compared to air and hydraulic systems.

Eliminate Tube Sheet Warping

Parallel pin expansion reduces the force exerted against the tube and tube sheet, eliminating costly tube sheet damage and warping.

Up To 2X The Speed

Increase cycle times with parallel pin expansion and get up to twice the speed of tapered rolling.

Change Tooling Quickly

New quick change design allows for tooling change outs in less than a minute. The rotary lock design allows for easy removal with no tooling needed.

Operator Friendly

Operator Friendly Controls
Easy to use HMI allows for quick job
setup and job saving capability.

Easy To Move

Heavy-duty casters, forklift pockets, and hoist ring provide a variety of methods to move the Hawk around the facility.

Consistent Tube Expansion

Roll Every Tube To Spec

System measures torque and controls system functions, allowing you to roll to the target wall reduction each time to eliminate costly re-rolling.

Record System Output

Ensure every tube is rolled to spec with torque data output. Quality control metrics ensure jobs meet customer requirements and pass hydro.

Maintain Tool Alignment

Expander holder increases tool life and ensures consistently rolled tubes with an expander holder that guides the expander and maintains tool alignment.

Longer Tool Life

Lubrication Where It's Needed

Spend less on consumables with through the cage Auto-Lubrication. The system increases tool life by providing lubrication exactly where it's needed, through the cage and directly to the rolls and mandrel.

Increase Expander Life

Swivel Mount securely supports the Power Head to relieve weight stress and increase expander life.

Safe & Ergonomic

Effortless Positioning

Upgraded mast and rail allows for easy positioning of the articulated arm, decreasing operator fatigue.

More Reach, Less Re-Adjusting Large radial reach increases productivity by allowing a large area of tubes to be rolled without re-adjusting the unit.

Supports Tool Weight

Pneumatic counterbalance decreases operator fatigue by absorbing torque and allowing for effortless positioning of the arm and rolling motor.

Built-in Safety Features

Safety control value protects the operator by eliminating a sudden drop of the articulated arm in case of pneumatic air loss.

The first truly complete system.

ULTRA HAWK[™]

Spares & Accessories

Spares & Accessories

- P8395 & P8784 Tube Rolling Lubricant: See page 19 for part numbers.
- Cage Adapter: Connects the expander cage to the lubrication system and enables quick change functionality. One included with each expander.
- Lube Spacer w/ O-ring: One included with each expander. Seals the mandrel and back of cage adapter.

Traditional 3 Roll Condenser Expanders

Tube Size

- 0.625" to 1.500" OD
- (15.9 to 38.1mm) OD

For additional reaches, add "-XX" to the end of the part number for desired length. (ie. HT24131-12 signifies a 12" reach tool)

Parallel Pin 3 Roll Condenser Expanders

Tube Size

- 0.625" to 1.500" OD
- (15.9 to 38.1mm) OD

For additional reaches, add "-XX" to the end of the part number for desired length. (ie. HX24131-12 signifies a 12" reach tool)

MONSTER HAWK™

Hydraulically-Driven Assisted Tube Rolling System

absorbs the torque of the rolling motor using a pneumatic counterbalance, which allows the operator to effortlessly move the motor into position.

Ergonomically roll a large area of tubes without readjusting the Monster Hawk, with its large radial reach. For convenient transportation of the unit, it is equipped with heavy-duty casters, forklift pockets and a hoist ring.

MONSTER HAWK™

Hydraulically-Driven Assisted Tube Rolling System

Increased Productivity

Blazingly Fast, Same Precise Control

Increase speed with up to twice the speed of tapered rolling while expanding each tube to spec with Direct Torque™ electronic control system.

Automatic Tool Lubrication

Through the cage Auto-Lubrication increases tool life by providing automatic expander lubrication exactly where it's needed, through the cage and directly to the rolls and mandrels. No messy cleanup by providing the right amount of lube with each expansion.

Change Tooling Quickly

Quickly change out Elliott's long-lasting PX24 Series Parallel Condenser Expanders with the built-in quick-change chuck system.

Consistent Tube Expansion

Roll Every Tube To Spec

Direct TorqueTM measures the torque and controls system functions regardless of fluctuations in hydraulic oil temperatures. Allowing you to roll to the target wall reduction each time to eliminate costly re-rolling.

Increase Tool Life

Swivel Mount securely supports the Power Head to relieve weight stress and increase expander life.

Operator Friendly

Operator Friendly Controls

No need to understand hydraulic pressures with the easy to use control panel, the operator simply sets the torque.

Instant On

Allows the operator to start rolling immediately without waiting for the hydraulics to warm up.

Hydraulic Oil Cooler

Keeps the hydraulic oil cool in even the most demanding applications.

Quick & Easy Setup

Get Up & Running Quickly

Fully assembled articulated arm minimizes setup time. Just attach the power head to the arm and get started.

Easy To Move

Heavy-duty casters, forklift pockets, and hoist ring, provide a variety of methods to easily move the Monster Hawk around the facilities.

Simple To Setup

Filter/Regulator with Lubricator allows for simple setup of the Monster Hawk and decreases maintenance by extending the life of the pneumatic counterbalance and air motor.

More Reach, Less Re-Adjusting

True Parallel Pin Tube Rolling

Roll Every Tube To Spec

Up To 2x The Speed Of Conventional Rolling

Automatic Through-The-Cage Tool Lubrication

MONSTER HAWK™

Hydraulically-Driven Assisted Tube Rolling System

Safe & Ergonomic

Supports Tool Weight

Pneumatic Counterbalance decreases operator fatigue by absorbing torque and allowing effortless positioning of the arm and rolling motor.

Effortless Positioning

The Articulated Arm increases operator ergonomics and decreases operator fatigue by supporting tool weight.

More Reach, Less Re-Adjusting Large reach radius increases productivity by allowing a large area of tubes to be rolled without re-adjusting the unit.

Built-in Safety Features

Safety Control Valve protects the operator by eliminating a sudden drop of the articulated arm in case of pneumatic air loss.

Works Great In Smaller Work Spaces

Weighted Pedestal allows for convenient placement of the Monster Hawk, even in a small workspace, with its compact design and small footprint.

Supports Tool Weight

Tubes within vessels need to be regularly tested for leaks for several reasons. If problems are suspected, either from unusual occurrences or decreased efficiency, there is a high likelihood that a leak is present. Additionally, it is important to test vessels in use during routine maintenance periods in order to maintain high efficiency and safety standards.

One of the most overlooked best practices for finding tube leaks is to clean the tubes before testing. If the tube is not cleaned before testing, tube leaks can go undetected. On the other hand, if a tube is not cleaned properly, any residue that is left in the tube can result in a false reading and potentially increase maintenance costs.

False negatives occur when tube holes are covered up by deposits. When the test gun is inserted into the tube and pressure is maintained, debris can be forced inside of a leak path, disguising the presence of a leak. This can cause issues later on once the debris is dislodged and the tube continues to leak. False positive readings can also occur if tubes

are not properly cleaned. If debris or excess lubricant is present in the ID of the tube it can cause the seal to slip and not expand properly. Without proper seal expansion, the test gun would show a false positive result, resulting in tubes being plugged unnecessarily.

Another issue that can occur from not cleaning tubes has to do with the tester itself. Vacuum tube testers have a screen inside the venturi nozzle that can become clogged from the deposit and debris inside the tube. If this occurs, the test gun will not be able to create a sufficient vacuum inside the tube. Small particles can also pass through the screen and collect on the check valve, preventing it from operating correctly. If the check valve does not work, it will allow air to pass into the tube, resulting in a false reading (a leak will be indicated where in fact there is no leak).

Overall, it is important that tubes are properly cleaned prior to testing for leaks. If tubes are not clean or if an improper cleaning method is used, it can result in false readings and potentially increase maintenance costs later on.

Jumbo Jiffy Gun Shoot Through Tube Cleaning System

Flush

The Jumbo Jiffy Gun is powered by an air and water combination to propel a wide range of reusable shoot through devices. Soft deposits such as mud and algae are removed from the tube in seconds!

Elliott's Jumbo Jiffy Gun Tube Cleaning System is the preferred method for cleaning condenser tubes in power utility plants, pulp, paper, steel mills and petrochemical plants.

Features & Benefits:

- Tapered nozzle covers wide range of sizes eliminating need for multiple nozzle sizes.
- · Utilizes reusable shoot through devices for lower cost.
- · Cleans without damaging tubes.
- On board pet cock to relieve pressure in clogged tubes.

Spares & Accessories:

- 5371CL Lexan Shield*
- Tapered Nozzle (See table on right.)*
- 5371NA Nozzle Adapter*
- P5371N15 Air Hose Whip 15' (4.6M) Long
- P5371N25 Air Hose Whip 25' (7.6M) Long
- P5371N50 Air Hose Whip 50' (15.2M) Long
- P5371N100 Air Hose Whip 100' (30.5M) Long
- P5224-12-15 Water Hose Whip 15' (4.6M) Long
- P5224-12-25 Water Hose Whip 25' (7.6M) Long
- P5224-12-50 Water Hose Whip 50' (15.2M) Long
- P5224-12-100 Water Hose Whip 100' (30.5M) Long

Jiffy Gun Kit includes:

- · Jumbo Jiffy Gun and Tapered Nozzle Assembly
- Tapered Nozzle
- Nozzle Adapter
- Lexan Shield
- 7-1/2' (2.3M) Water Hose Whip
- 7-1/2' (2.3M) Air Hose Whip
- Carrying Case

- Light
- MediumHeavy
- **Flush**
- Wet
- Drv

Elliott Tool's Heat Exchanger Tube Cleaners utilize a rigid shaft to provide high torque cleaning to remove hard deposits often found in heat exchanger tubes. These cleaners are ideal for use in sugar mills, paper mills, chemical plants, and oil refineries.

The trigger-operated cleaner features an air-powered motor that remains external to the tube, providing a powerful rotary motion to the shaft and cleaning tool. The 5224XL utilizes water flush operation to wash away all those loose deposits.

Air purge models are also available for any cleaning application where water flush can not be used. Contact Customer Service for details.

Features & Benefits:

- High torque for hard or gummy deposits.
- 5125 heavy duty motor ideal for refineries.
- Standard model features water flush operation, convenient for flushing away loose deposits.
- · Lightweight and powerful.
- Safer & much less expensive than water blasting.

Spares & Accessories:

- P5370N 7-1/2 ft. (2.3M) Water Hose Whip (for 5224XL)
- P5224-12 7-1/2 ft. (2.3M) Air Hose Whip (for 5224XL)
- 835200-25 25 ft. (7.6M) Air Hose Whip (for 5125)
- 835200-50 50 ft. (15.2M) Air Hose Whip (for 5125)
- 512513 Paddles (1 set) (for 5125)
- See page 108 for brushes & drills

^{*} Brush standard material is steel, brushes are also available in brass and stainless steel materials.

Elliott Cleaners Excel

During A Major Tube Cleaning Project

66 Our client was very pleased with the results from our work with Elliott's equipment because the job was done faster and at better quality than with any other contractor on this application. >>

-Sheik Mohammed

from Elliott Tool for use on a project with a major client cleaning over 8,000 tubes. Our client was very pleased with the results from our work with this equipment because the job was done faster and at better quality than with any other contractor on this application.

More recently the client even wrote an internal memo to other departments in their company suggesting Majed Alrammah and Elliott Tool be the top consideration for future cleaning

Three separate contractors attempted to clean this very challenging application which is summarized below. One contractor used high pressure water blasting to practically no effect.

Vessel: Fin Fan Cooler Type of deposit: Rock Solid. Composition: Calcium carbonate. Thickness of deposit: 75%, entire length Tube section: Straight, horizontal

Tube OD: 1" Tube wall thickness: 14 BWG Tube material: Carbon steel Tube length: 18 M Tubes cleaned: >8,000

Elliott's Roto Jet I and air motor were used to drive the cleaning heads. The Roto Jet I was most commonly used, but when near complete tube blockage was encountered, the air motor was used. The two cleaning heads used were Elliott's Cone Cutter and Twist Drill. The Cone Cutter worked best, though in places where the tubes sagged due to long lengths we used the Elliott Twist Drill to good effect. It would take 6-10 minutes to clean an 18 meter long tube.

Elliott Tool's product quality and customer support is something Majed A Alrammah can depend on implicitly and I can highly recommend that you consider Elliott Tool.

Sheik Mohammed Majed A. Alrammah General Contracting Est.

Elliott Tool Roto-Jet Cleaning Systems are an effective solution to increasing chiller, condenser, and other heat exchanger efficiency.

Elliott Tool offers a variety of Roto-Jet Tube Cleaners to suit your specific application needs:

Roto-Jet I Series

Electric heavy duty models 0620AR (110V) and 0820AR (220V) are ideal for mechanical contractors that perform tube cleaning on a regular basis. Equipped with a 1 HP motor, these cleaners are powerful yet simple to use due to their reversing capability.

Roto-Jet II Series

Electric models 0650R (110V) and 0750R (220V) are recommended for operating sites such as hospitals, schools, and other institutions that perform tube cleaning on a periodic basis. Equipped with a 1/2 HP motor, these cleaners are economical and reversible, making them easy to operate and handle.

Pneumatic Roto-Jet

Model 0420 is a pneumatic tube cleaner with a powerful 4 HP motor to clean tubes where electricity is not readily available. The 0420 is perfect for tube cleaning performed in power utility plants and paper, steel, and sugar mills.

All of the Roto-Jet Tube Cleaning Systems use flexible shafts and cleaning tools to flush deposits free from the tubes, enabling you to increase heat transfer efficiencies while reducing your heat transfer costs.

Features & Benefits:

- Heavy duty shaft for cleaning heavy deposits.
- Flexible shaft with water flush for removal of deposits in curved tubes.
- Storage compartment for foot pedal, controls, & supplies.
- Lightweight and sized for confined work spaces.
- Uses standard flex shafts for easy maintenance.
- Ground fault isolation for increased operator safety.
- Roto-Jet II (220V) is CE mark certified.

Moisture Application Notes

Wet Commonly used in chillers, watertube boilers, and

other applications where water does not inhibit cleaning. Never operate wet shafts without water

flushing through the shaft's casing.

Dry Commonly used in firetube boilers and sugar mill

cleaning.

University Of Texas At Austin Chooses Die Hard As Their

Preferred Tube Cleaning Machine

QUICK SUMMARY

The Challenge

- Every time they used their previous machine, something broke.
- Passing the annual bore scope inspections was becoming a challenge.

The Solution

- Tried Elliott's Die-Hard tube cleaning system during their year round cleaning season.
- Die-Hard offered a cableless design eliminating the need to replace cables.
- Quad cleaning brush action powered by water pressure and pulse-jet actuator.

The Results

- Dependable cleaning machines and hoses last the whole season.
- Brush with actuator does a better job cleaning tubes.
- Elliott's service has always been reliable and parts are available
- Improved productivity.

The Challenge

The Chilling Station Maintenance Supervisor, Charles Gardinier and the operators who work with him at the University of Texas at Austin are faced with the challenge of keeping several 5,000 ton chillers in peak operating condition. Part of their maintenance is cleaning the vessels to maintain high efficiency.

However, they were experiencing daily challenges with their previous machines breaking down every time they were used. According to Charles, the spinning cable tended to be the worst problem. Either

the spring of the cable would break or the cable would kink, which would cost about \$400 each time in parts and labor.

The operators also like to use a tighter brush and brush hard due to scale buildup. Getting a good clean on their chillers with their previous cleaning system was becoming a very difficult job.

Charles was looking for a reliable tube cleaner with brushes to handle their application that would enable his operators to efficiently clean tubes.

The Solution

The technicians used Elliott's Die-Hard during a year-round cleaning season. The Die-Hard is a cableless tube cleaning system designed for light to medium deposits found in chiller, condenser and heat exchanger tubes.

Instead of using a rotating cable with a spinning brush, the Die-Hard utilizes water pressure to power the brushing action. This eliminated Charles' need to constantly replace broken cables.

A pulse-jet actuator enables the brush to

11 The Elliott system is much more reliable than our previous supplier's and the Die-Hard's brush with actuator does a lot better job cleaning our tubes.

- Charles Gardinier, Chilling Station Maintenance Supervisor

provide a quad cleaning action that quickly flushes tube debris such as scale, algae and mud out of the tube.

The Results

"Operators like the tool a lot," says Charles.

They immediately appreciated:

- · Rugged engineering and construction of the Die-Hard and its brushes for a better clean, higher uptime, lower repair costs.
- · Automatic feeding unit: Roughly the same

· No broken cables and very minimal maintenance required for Elliott's

Die-Hard.

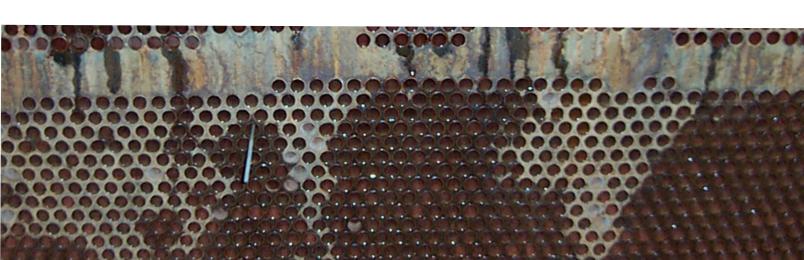

"All we do is replace the consumable items due to wear and tear and the ruggedness and dependability of Elliott machines and hoses mean they last the whole, annual season," said Charles. This means the University avoids the approximate \$400 cost in parts and labor that would inevitably happen with each use of their previous machines.

The Elliott system is "much more reliable

automatic feeding speed as his older unit. than our previous supplier's and the Die-Hard's brush with actuator does a lot better job cleaning our tubes."

> On top of the improvements in uptime and the more efficient cleaning of tubes with the Die-Hard, "Elliott's service has always been good and reliable and replacement parts and consumables are available if we need them," said Charles.

> Charles is very pleased with his Die-Hard Tube Cleaner and the time and money that he has saved his operators and the University of Texas at Austin.

Die-Hard™

Cableless Tube Cleaner

Tube Size

- 3/4" and 1" OD
- 19.1mm and 25.4mm OD

- Flush
- Wet

Cleans better in less time.

Elliott Tool's Die-Hard™ is the first cableless tube cleaner that successfully cleans light to medium deposits found in chiller, condenser, and heat exchanger tubes.

Water pressure is utilized instead of a spinning cable to provide the power for the brushing action. A patented pulse-jet actuator with brush provides a quad cleaning action to flush tube debris such as scale, mud, and algae out the back end of the tube. The Die-Hard™'s quad cleaning action enables you to be more productive while getting tubes cleaner!

Features & Benefits:

- · Cleans better in less time.
- No cable! That's right never spend time or money on replacement flex shafts or cables again.
- Rugged engineering and construction for higher uptime and lower repair costs.
- Three feet/second auto feed for high productivity.
- Ergonomic design for lower labor costs and higher operator satisfaction.
- · Quad cleaning action for better cleaning and productivity.
- Drain port design prevents the actuator from being pulled into the system and damaging gears.

Specifications:

- 110/1/60 electric, 14 amps
- 0.5 GPM water consumption
- 10 pulses / second ~ 800 PSI
- Hydro powered brush actuator

M5801-00 Die-Hard™ Cleaner Package includes:

- M5801-21 Auto-Feed Pump Unit
- M5801-02-45 45 ft. (13.7M) Auto-Feed Hose
- M5801-03T Trigger Switch Feed Gun Assembly (includes M5808-20 Trigger Switch Feed Gun, M5801-03-03 Auto-feed Casing, and M5801-03-01 3/4" (19.1mm) and M5801-03-02 1" (25.4mm) Gun Nozzles)
- M5801-04 Actuator (0.520" OD)
- M5803-02 Antifreeze w/ Adapter
- (2) M5801-09 3/8-7/16 Combination Wrenches
- M5801-11 Mesh Bag
- Brushes sold separately.

- Medium

Flush

Dry

Weighs Only 3 lbs

Lightweight Design Reduces Operator Fatigue.

Elliott's Soot Buster is a pneumatically actuated cleaning tool used to clean firetube boilers.

Simply insert the brush into the tube and the unique oscillating action will propel the cleaner at 1.5 feet per second, scrubbing the tube ID with each pulse. When it senses the end of the tube, the cleaner reverses the direction of thrust and returns to the operator.

With a capability of cleaning 60 tubes per hour, the time required to clean a firetube boiler or oil field drill pipe is greatly reduced.

Features & Benefits:

Lightweight (3.5 lbs)

Compact design reduces operator fatigue, increasing productivity.

Decrease Downtime

Rugged construction with no plastic gears or parts for long lasting cleaning action.

Air Powered

The operator stays completely dry.

Quick & Easy Setup

Set-up is fast with no cables to arrange. Just select the proper brush size and start cleaning!

Half The Time As Rotary Cleaners

Auto-feed is a standard feature, allowing the brush to self-feed to the end of the tube. When it senses the end of the tube, it reverses direction, eliminating the need to "measure-off."

Soot Buster package includes:

- Pneumatic air pulsator motor
- · Pneumatic foot control valve
- Filter/lubricator with pressure gauge
- Y-tube for vacuum hose
- 33 ft. (10M) air source hose
- 33 ft. (10M) heavy-duty pulsator motor hose
- 16-1/2 ft. (5M) filter/lubricator air hose

The Soot Buster not only makes my job so much easier, but it is really a dream come true. I'm so happy we bought it.

- Joe Stewart, Great Smoky Mountains Railroad

Recycling Plant Finds A

Superior & Productive Way To Clean Boiler Tubes

QUICK SUMMARY

The Challenge

- Minimize downtime while keeping a tight maintenance schedule.
- Cable cleaners required too much time to set-up and were difficult to use in tight spaces.
- · High consumable cost replacing broken cables..

The Solution

 Trial Elliott's Soot Buster on an upcoming maintenance job cleaning 680 tubes.

The Results

- Less than 1/2 the time for maintenance.
- · Less consumable costs.
- · Worked well in tight spaces.

The Challenge

With a very tight schedule and the demands for minimal down time, Chris Lewis, Maintenance Manager at Neath Port Talbot Ltd, needed to find a way to clean his two Cochran Boilers. On a limited budget and with 340 tubes in each boiler, he needed to find a quick and efficient tube cleaning method.

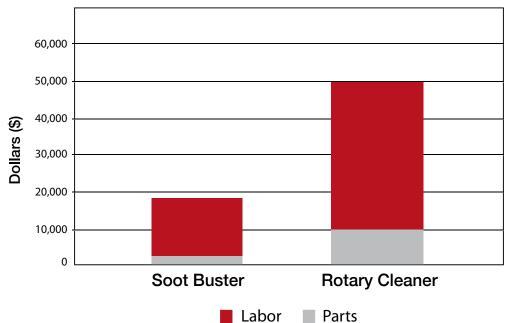

There are many tube cleaning methods – water, electric, or air. After using electric rotary tools for a short period of time, he was disappointed with the results. The expensive cables broke regularly and the tool damaged tubes and tube ends. Chris was looking for a fast, but efficient,

air operated tool. Water was not an option because of the effluent problems and resulting mess. He needed to overcome the following major problems he was experiencing:

- Too much set-up time in laying out the cables.
- · Cleaning in tight spaces.
- Major consumable costs each year with the constant replacement of cables.
- Operators tied up in non-value added maintenance time fixing equipment and running time operating the tool.

Typical Cost Savings After Five Years

44 Approved by all my operators as effective and easy to use as opposed to a rotary tool, cutting cleaning time by at least half. >>>

- Chris Lewis, Maintenance Manager

The Solution

After Chris' operators tried the Soot Buster, they were impressed and immediately appreciated its key features:

- The operator stays completely dry due to dry cleaning of the tubes.
- No spinning cables, flexible shafts, or rotating rods.
- After initial system purchase, maintenance and consumable costs are very low.
- Less downtime with much faster, more efficient cleaning.
- Tool is auto-reversing at the end of the tube eliminating the need for any feed, pulling, or pushing from the operator resulting in minimum operator fatigue.

· Minimum health and safety risks.

"The Soot Buster is the best tool on the market for cleaning tubes in confined spaces."

The Results

Maintenance time and costs have been reduced by more than half. After the initial, low investment of the cleaning system, the consumable and maintenance costs are minimal. The illustration above shows the savings that Chris projects to find using the Soot Buster over a five year period.

Turbine Style Straight Tube Cleaners

D600, 1100 & 1300 Series

D600 Series Air Turbine Style Straight Tube Cleaner

Tube Size

- 0.495" to 1.730" ID
- 12.6mm to 43.9mm ID

Tube Section

Straight

Type

- · Soft, gummy or organic
- Hard powder

Thickness

- Light
- Medium

Flush Dry

• 11-26 CFM (0.3-0.7 M3/min.) @ 80 PSI (5.5 bar)

Air

1100 Series Air Turbine Style Straight Tube Cleaner

Tube Size

- 2.250" to 13.225" ID
- 57.15mm to 335.9mm ID

Tube Section

- Straight
- - · Soft, gummy or organic
 - Hard powder

Thickness

- Light
- Medium

Flush

• Dry

Air

Air

• 80-200 CFM (2.3-5.7 M3/min.) @ 80 PSI (5.5 bar)

Tube Size

- 1.750" to 3.999" ID
- 44.5mm to 101.6mm ID

Tube Section

- Straight

Type

- Hard powder
- Rock solid

Thickness

1300 Series Air Turbine Style Straight Tube Cleaner

- Medium
- Heavy

Flush Dry

• 65-135 CFM (1.8-3.8 M3/min.) @ 80 PSI (5.5 bar)

The air turbine style motor design provides an immediate and powerful startup to drive the cleaning head down the tube at a high speed, removing light to medium deposits of scale, mud, and other process residues.

Features & Benefits:

- · Powerful motor design allows for immediate motor startup.
- The motor requires no special tools for repair.
- · Armored hose design for rigidity and heat resistance.

Spares & Accessories:

- 6055 Lubricator
- Hand & Foot Valves, see page 142
- Operating Hoses, see page 143

Lubricator

Turbine Style Straight Tube Cleaners 1100 Series - 6.250" to 9.475" (158.8 to 240.7mm)

For 1100 Series, tube ID range 6.250" to 13.225" (158.8mm to 335.9mm) air turbine motors will be equipped with motor sleeves to allow the use of small, lightweight motors, reducing the size of the operating hose required.

Air

• 65-135 CFM (1.8-3.8 M3/min.) @ 80 PSI (5.5 bar)

The air turbine style motor design provides an immediate and powerful startup to drive the cleaning head down the tube at a high speed, removing light to medium deposits of scale, mud, and other process residues.

Features & Benefits:

- Powerful motor design allows for immediate motor startup.
- The motor requires no special tools for repair.
- Armored hose design for rigidity and heat resistance.

Spares & Accessories:

- 6055 Lubricator
- Hand & Foot Valves, see page 142
- Operating Hoses, see page 143

Lubricator

Note: Operating hoses are sold separately for these Cleaner Packages.

^{*} Operating Hoses are available in 25ft & 50ft sizes. XX signifies desired hose length (ex: 85HS037-25).

Turbine Style Curved Tube Cleaners

1100 Series - 5.000" to 9.975" (127.0 to 253.4mm)

For 1100 Series, tube ID range 6.250" to 13.225" (158.8mm to 335.9mm) air turbine motors will be equipped with motor sleeves to allow the use of small, lightweight motors, reducing the size of the operating hose required.

Note: Operating hoses are sold separately for these Cleaner Packages.

^{*} Operating Hoses are available in 25ft & 50ft sizes. XX signifies desired hose length (ex: 85HS037-25). **For extra heavy duty cleaning applications.

Mechanical Tube Cleaning Advantages & Common Misconceptions

Tube cleaning is a necessary part of any vessel maintenance process. Depending on the application, water, gases, and other caustic chemicals can be run through the unit. Overtime, these compounds cause deposit build-up inside of the tubes, resulting in a loss in operating efficiency. As deposit builds, the energy required to run that vessel can be extremely high, and eventually lead to tube wall loss and leaks. To maintain efficiency and prolong the life of the tubes, cleaning and inspections should occur at regular intervals.

What is Mechanical Tube Cleaning?

With a variety of tube cleaning methods available, it can be difficult to know which one is the best for your application. While there are pros and cons to each method of cleaning, mechanical tube cleaning can be the most effective option depending on the site and the type of deposit build-up.

Mechanical cleaning is the process of physically removing deposit and scale from a tube using a brush, drill, scraper, or descaling tool. The cleaning head is driven by a motor that is specified per the application and typically hand fed through each tube using an operating hose. With a variety of cleaning head options, the set-up is generally determined by the vessel, deposit type, deposit build-up, tube material, and if the tubes are curved or straight.

Cleaning Advantages

One of the advantages to mechanical cleaning is that it can be conducted on site. This differs from several other cleaning methods such as hydrolancing, abrasives, chemical baths, or thermal cleaning. While each of these can be extremely effective, they typically require that cleaning take place off site due to the amount of space and requirements to manage the water and chemicals being used.

Another benefit of mechanical cleaning is that it is generally safer and less expensive than other high-pressure methods like waterblasting. Due to the operating pressure of these set-ups, it can pose a risk to operator safety if not done correctly or in an isolated area.

Additionally, mechanical cleaning can be more effective at removing harder deposits and achieving a better finish. Depending on the application, some customers will use a primary cleaning method like a chemical bath and then follow-up with a mechanical cleaner to remove the remaining residue from the tubes.

Common Misconceptions

One of the most common misconceptions about mechanical cleaning is that it can cause damage to the tubes. However, the risk of tube damage is not any greater than the other cleaning options on the market if operated correctly. For example, the style of cleaner that would be used on a straight, carbon steel tube with rock hard deposit is going to be different than what would be used on a copper tube in a chiller. Understanding the types of cleaners available will ensure that the right option is selected for the application.

Overall, mechanical cleaning is an easier, more effective cleaning option for many customers. From the simple set-up to the variety of options available, mechanical cleaners provide a lot of flexibility for customers to perform routine cleaning on-site without removing the vessel. Additionally, in cases where other cleaning methods are required, mechanical cleaning can be a good secondary operation to provide a better finish.

Elliott's 85 Series Operating Hoses are designed to perform even in the toughest applications. Utilizing the latest manufacturing techniques and materials, these hoses provide the durability and rigidity you need to get the job done.

Standard Operating Hose

Elliott's Standard hose is great for smaller turbine cleaning applications with light to medium deposits.

Heavy Duty Operating Hose

Elliott's Heavy Duty hose is designed to hold up in tougher applications. Made with an internal layer of steel braiding and an abrasion and oil resistant wrap, this hose is ideal for pipe rattling applications, heavy deposits, and large transfer lines.

High Temperature Operating Hose

Elliott's High Temperature hose is engineered to withstand high heat applications. This innovative design pairs a durable, double-braided hose with an insulating Kevlar sleeve, rated to perform in upwards of 500°F, making it ideal for Aluminum Siphon cleaning.

High Temperature Kevlar Sleeve

Why use boiler cleaning heads when cleaning siphon tubes? Elliott's powerful Turbine Style Motors and Drill Heads offer aggressively fast cleaning and are engineered specifically for aluminum siphon tubes.

Elliott offers a unique Combination Drill Head to clean aggressively reducing cleaning time. Universal Coupling options are available, including welded rivets and Limited Throw, for lasting performance and increased rotor life.

The easy-to-maintain design of Elliott's Turbine Style Tube Cleaner Motors decreases cost and maintenance.

Elliott's Aluminum Siphon Tube Cleaners may be hand operated or machine fed. Contact your local support or Elliott for additional details.

Combination Drill Head

Features & Benefits:

- Optional stellited drills for extended life and cleaning performance.
- Our unique Combination Drill Head cleans siphon tubes aggressively reducing cleaning time.
- Optional Universal Coupling Rivets may be welded for lasting performance.
- Optional Limited Throw Universal Coupling increases the motor's rotor life.
- Design allows for easy change-over of parts and maintenance.

The air turbine style motor design provides an immediate and powerful startup to drive the cleaning head down the tube at a high speed, removing light to medium deposits of scale, mud, and other process residues.

Features & Benefits:

- · Powerful multi vane motors for fast start up.
- Cone shape cutter design for optimum pipe cleaning.
- Reinforced operating hose for longer service life.
- Bearing-less design makes it easy to service, with no special tools required.
- Metal vanes for motor durability and prolonged tool life.
- Optional air valves allow you to turn off supply near the motor, making it a one man operation.

Spares & Accessories:

- 6055 Lubricator
- Operating Hose, see table below or page 143
- Air Valve, see table below or page 142
- Foot Valve, see page 142

Elliott's Gas Line Cleaners are phenomenal. They have a long tool life and are easy to rebuild - my guys love them!

These product kits have been specially designed for the oil field. They are recommended for the most common sizes used in the oil field today.

Rattling equipment for oil field tubular products are ideal for 2.375" to 20.000" OD (60.3mm to 508.0mm). Additional sizes and configurations are available upon request.

Features & Benefits:

- · Powerful motors for fast cleaning.
- · Engineered design that is easy to maintain.
- Armored hose design for rigidity and torque absorption.

Rattling Equipment Kit Includes:

- Air Motor
- Motor Sleeve (where applicable)
- Wrench
- Cutter Head
- Head Coupling
- 2 Sets of replacement cutters
- 2 Sets of replacement cutter pins

Spares & Accessories:

- Operating Hose: Highly recommended for proper operation and long life.
- 6055 Lubricator: Highly recommended for proper operation and long life.
- Foot Valve
- Replacement Cutters, Cutter Pins, & Arms
- Motor Paddles & Rotors

The ET Series cleaning motors and heads are designed and tested using advanced engineering practices to confidently withstand tough cleaning applications and provide long tool life. The powerful motor combined with the cleaning head provide superior cleaning performance for oil field pipes and tubular products.

The ET Series offers a wide selection of cutters and cleaning heads for 7/8" to 4-3/4" (22.225 to 120.65mm) tubes ranging from single head cutters to spring loaded swing arm. Additional sizes and configurations are available upon request.

Features & Benefits:

- The most advanced engineering and manufacturing principles for powerful performance and superior cleaning.
- Thoroughly tested, wear-resistant design for the longest tool life in the industry.
- Gearless design for easy maintenance.

Oil Field Pipeyard Cleaning Motors & Heads

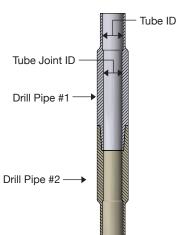

Tube Internal Diameter (ID)

Is a result of the OD and the wall thickness.

Drift Diameter

Is the diameter of a 42" long mandrel that passes through the tubing joint. It is a foremost parameter as it gives the maximum OD of any equipment to run through the tubing string and accounts for roundness of a pipe.

RECON 1250 & 2500 - Pressure

Tube Size

- 0.500" to 2.500" OD
- 12.7mm to 63.5mm OD

Intelligently designed and battle tested for impossible missions.

Take on the mission of quickly and easily finding tube leaks. Utilize the RECON Series tube leak test guns and test every tube quickly and efficiently with the most ergonomic test gun on the market.

From the lightweight cast aluminum body to the ergonomically modeled pistol grip, each feature offers an engineered and rugged solution for finding leaking tubes.

The RECON 1250 and 2500 are simple to operate. Connect the air supply, insert the seals into both sides of the tube ends and pressurize the tubes. Then monitor the gauges for drops in air pressure, which indicate a tube leak.

RECON 1250 Kit (TTP1250) includes:

Tube Leak Test Gun Set

- 3 Support Tube Assemblies (TTPST1, TTPST2, TTPST3)
- Pressure Regulator
- Tool Case

RECON 2500 Kit (TTP2500) includes:

Tube Leak Test Gun Set

- 2 Support Tube Assemblies (TTPST4)
- Washers to support up to 2.5" seal sets.
- Tool Case

Spares & Accessories:

- Seal & Washer Sets: Seals are compatible with Elliott's 5373 Series Test Gun. See table on page 154.
- Seal Kits: Includes all of the seal sets to cover the entire range of the gun. Available for both the RECON 1250 and 2500 Test Guns. See table below.
- Support Tubes & Support Tube Extensions: Make finding leaks easier on channel head and water box applications.
 Support tubes are compatible with Elliott's 5373 Series
 Test Gun. See table on page 154.

| Tube OD Range | Tube Leak Test Gun Kit* | Seal Kit |

| 1/2" x 12 BWG - 1-1/4" x 15 BWG (12.7mm x 2.77 Wall - 34.9mm x 1.83 Wall) | TTP1250 | TTP1250SK |
| 1-1/4" x 16 BWG - 2-1/2" x 24 BWG (31.75mm x 1.65 Wall - 63.5mm x 0.56 Wall) | TTP2500 | TTP2500SK |
| *Seal Sets are ordered separately. | | |

RECON 1250 & 2500 - Pressure

Easy to hold and use with superior grip ergonomics.

Steel gauge body to protect the gauge.

Use in tight workspaces because of its thin profile.

Safe & Ergonomic

Superior Grip

Easy to hold and use with superior grip ergonomics, utilizing a non-slip, wrinkle-coat finish on the handle.

Works Great In Small Spaces Easy to use in tight work spaces because of its thin profile.

Built-In Safety Features

Ensure safety with a bleed off valve to release pressure and a moving piston positioned away from the operator.

Operator Friendly

Reduce operator fatigue and increase efficiency with the lightweight aluminum body.

Increased Productivity

Easy To Use

Simply connect the air supply, insert the seals into both sides of the tube ends, pull the trigger to pressurize the tube, and monitor.

Increase Accuracy

Increase accuracy using the dual gauge design to read pressure from both tube ends.

Long Tool Life

Durable cast aluminum body that protects the working components and a steel gauge body to protect the gauge.

Specifications:

RECON 1250 & 2500 Air Requirements:

- Minimum 40 PSI (2.7 bar)
- Maximum 125 PSI (8.5 bar)

How Wall Loss & Tube Leaks Impact Vessel Efficiency

To get the best performance out of a vessel it's important that it maintains necessary operating capacity. While there are several preventative maintenance procedures that can prolong the life of the vessel, eventually a decision on retubing or replacing the unit will need to be made. Tube wall loss, tube punctures, deposit build-up, a catastrophic failure can all contribute to reduced operating efficiencies. As a result, it's important to understand when a unit needs to be evaluated and methods for prolonging replacement.

Vessel testing is generally conducted using eddy current testing in heat exchangers or ultrasonic testing in boilers. If testing reveals significant tube wall loss, tubes can be plugged, sleeved, lined, or replaced. The type of action required usually comes down to the age of the vessel, the application it's being used in, and the budget an organization has for maintenance.

In heat exchanger applications, vessels are typically built with a 10 - 15% surplus capacity. This means that when tubes are plugged or clogged with debris, it can still maintain an overall operating efficiency of 100% until it's reached 10 - 15% of the vessel. While there may be certain applications where a vessel does not need to maintain 100% capacity, in higher production facilities like refineries, the goal is to be operating at the maximum limit to keep up with demand.

Once the operating efficiency of an exchanger is below 100%, many customers will look at next steps. Often refineries will have one or two back up exchangers that can take over in the event of a catastrophic failure or planned maintenance schedule. In these situations, the

vessel that needs maintenance can be turned off, pulled, and shipped out to a fabricator for service.

Depending on the amount of damage to the tube, sleeving or lining can be a great way to reduce cost and labor. A sleeve is a short section of tube that is expanded into the tube end and tube sheet, to extend the life of the tube end. These are used when there is wear at the tube sheet, generally on the inlet side of the vessel. Similarly, a liner is a full-length patch that is used when there is wall loss throughout the tube. This is installed by hard rolling at the end of the tube sheet, then sealed to the entirety of the tube using hydrostatic pressure.

If the amount of wall loss in the vessel is too extreme for sleeving or liners, the vessel will either need to be completely retubed or replaced. Retubing presents several challenges, due to the uncertainty of sizes and conditions. If the costs are too high, vessels may be scrapped in favor of a new one. However, in some cases, retubing may be the most economical decision. For example, when it comes to exotic materials like Hastelloy, Inconel, or titanium, it can be a lot easier to

preserve the tube sheet and do a full retube. This is due to limitations in sourcing material, as well as the cost of machining it.

While similar to heat exchanger applications, boilers can typically go longer between retubes or replacements depending on the type of fuel used. With cleaner fuel sources and better tube materials, boilers will experience less deposit build-up, prolonging the life of the tubes. If a boiler does experience leaks or extreme wall loss, many customers will opt to plug or replace tubes on an as needed basis. After so many tubes have been plugged, the boiler will either need a full re-tube or be replaced.

Overall, it's important that a vessel is working as close to 100% capacity as possible, to maintain efficiencies and reduce unexpected outages. Once wall loss or tube leaks begin to impact the efficiency of the vessel, preventative maintenance steps will need to be taken. This can range from sleeving the vessel to a full retube of the unit. As a result, it's important to understand when a unit needs to be evaluated and the different options available for repair.

RECON 1500 - Vacuum

Tube Size

- 0.280" to 2.456" ID
- 7.1mm to 62.4mm ID

Intelligently designed and battle tested for impossible missions.

Take on the mission of quickly and easily finding tube leaks. Utilize the RECON Series tube leak test guns and test every tube quickly and efficiently with the most ergonomic test gun on the market.

From the lightweight cast aluminum body to the ergonomically modeled pistol grip, each feature offers an engineered and rugged solution for finding leaking tubes.

Operating the RECON 1500 Tube Leak Test Gun is simple. With the air supply connected, plug one tube end with the test gun and the other end with the T-Handle Plugging Tool. Press the lever trigger and the Venturi System quickly and efficiently evacuates the tube. Then monitor the gauge for loss of vacuum, which indicates a tube leak.

| Tube ID Range | Tube Leak Test Gun Kit | Seal & Washer Set Part Number |

RECON 1500 Kit includes:

- Tube Leak Test Gun
- T-Handle Plugging Tool
- 2 Seal & Washer Sets (TTVS1, TTVS2)
- Tool Case

Spares & Accessories:

 Seal & Washer Sets: TTVST3 and TTVS3 are available to accommodate larger tube sizes. TTVST3 includes a seal and washer set for the Support Tube and T-Handle Plugging Tool.

See table to the left.

- Support Tube Extensions: Make finding leaks easier on channel head and water box applications. Available in lengths of 12", 24", 36" and 48". Support Tubes are compatible with Elliott's 5556 Series Test Gun. See table to the left.
- Filter Element (TTV1500FE)

RECON Series Tube Leak Test Guns RECON 1500 - Vacuum

Easy to hold and use with superior grip ergonomics.

Field replaceable Venturi System

Use in tight workspaces because of its thin profile.

Safe & Ergonomic

Superior Grip

Easy to hold and use with superior grip ergonomics, utilizing a non-slip, wrinkle-coat finish on the handle.

Works Great In Small Spaces Easy to use in tight work spaces because of its thin profile.

Operator Friendly

Reduce operator fatigue and increase efficiency with the lightweight aluminum body.

Increased Productivity

Easy To Use

Simply insert the seals into both ends of the tube, pull the trigger to evacuate the air, and monitor.

Works With A Variety Of Sizes

Tapered seal design allows the operator to test a large range of tube IDs without changing seals, washers, or support tube assemblies.

Easy Maintenance

Avoid replacing the entire test gun in the case of damage, with the field replaceable Venturi System. It's quick and easy to replace the filter element that protects the gun from harmful debris.

Long Tool Life

Durable cast aluminum body that protects the working components and a steel gauge body to protect the gauge.

Specifications:

RECON 1500 Air Requirements:

- Minimum 40 PSI (2.7 bar)
- Maximum 130 PSI (8.9 bar)

One-Piece Tube Plugs

Tube Size

Maximum Pressure

- 0.375" to 3.000" OD
- 9.5mm to 76.2mm OD

Elliott's One-Piece Tube Plugs cover a wide tube OD range, making them ideal for sealing leaky tubes in both heat exchangers and boilers.

• 150 PSI

It is good practice to install a plug that is the same as or a compatible material to the tube to be plugged. The tube plugs are available in an array of materials to suit your needs: brass, carbon steel, 304 stainless steel, 316 stainless steel, 416 stainless steel, aluminum, and Monel (other materials are available upon request). Elliott recommends puncturing the leaky tube with a One-Revolution Tube Cutter. This will ensure the tube is properly vented prior to plugging.

Features & Benefits:

- · Quick method to plug leaky tubes less labor cost.
- Easy to weld to tube sheet peace of mind.
- Plug covers multiple tube sizes less inventory cost.
- Material certifications included for traceability and safety compliance.

Spares & Accessories:

 One Revolution Tube Cutter: Utilize to puncture the tube to ensure the tube is properly vented so pressure cannot build up in the tube and cause the plugs to loosen. See page 182.

WHAT'S THE DEAL WITH SA-105?

Understanding Material Selection For Tube Plug Welding

Welding has become fairly common practice in pressure vessel fabrication and maintenance. From tube ends to plugs, welding can provide additional strength or sealing coverage if done correctly. When it comes to tube plugging, many customers are facing questions about plug materials and special requirements to ensure vessel specifications are met. In this article we will discuss the changes to the ASME code, material types and nomenclature, and impacts to the welding process.

Selecting The Right Material

When plugging a tube, it's best practice to use the same or a compatible material to the tube to prevent corrosion. Using a dissimilar metal will cause the tube and plug to corrode, resulting in a leak and plug failure. Generally, in most cases it's easy to match the tube material to the plug without any special material designations. However, there are a few materials that can have several grades or uses depending on the application.

Nomenclature

Different grades of Carbon Steel have become more popular, due to specifications set by ASME and other standards for welding.

One method to identify materials is based on the organization that specifies it. The American Society for Testing and Materials (ASTM) and the American Society for Mechanical Engineers (ASME) often work together to produce material specifications for the pressure vessel industry. As a result, their spec'd materials will often start with ASTM or ASME followed by the material, or an "S" prefix will be added in front of the material number.

The ASTM Grading System will also assign a letter prefix to a metal based on the category. For example, 'A' typically refers to ferrous materials (contains iron), where 'B' refers to nonferrous materials (does not contain iron). Combined with the organization prefix, materials may read ASTM A105 or simply SA-105.

Tubing Material vs. Bar Stock

When matching plugs or tooling to a tube spec, it can be difficult to know which designation to look for. Materials that are specified by ASME or ASTM often refer to the tube material itself. Depending on the grade, the material used to manufacture

"SA-105 Carbon Steel is often specified due to its ability to withstand high temperatures and pressures without degrading."

tubes may not be available in a solid round bar for manufacturing. This means that materials may not match on name alone but should be matched based on the chemical composition of the material.

For example, SA-105 specifies a seamless forged carbon steel pipe that can be used in pressure systems

at variable temperatures. However, SA-105 does not have a solid round bar counterpart instead it points to a different "A" hotrolled carbon steel with a specific chemical composition matching that of SA-105.

Chemical Properties For Welding

While many materials can be used for welding operations, the preferred type of metal can vary depending upon the welding method and application.

In the case of tube plug welding, SA-105 Carbon Steel is often specified due to its ability to withstand high temperatures and pressures. Since SA-105 tubing is forged, it is much stronger than regular carbon steel and can withstand higher temperatures without degrading. Additionally, it's lower carbon content makes it an easier material to weld compared to other carbon steels.

Plug Installation

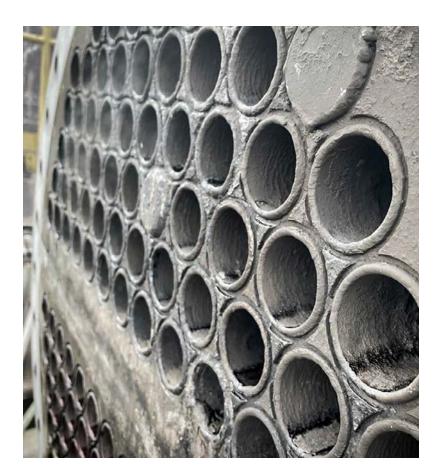

Once it's determined that a vessel needs to be plugged, the end user or manufacturer will specify the type of plug that should be used, the material, as well as other process requirements. Depending on the vessel and the amount of tube degradation, welding may be specified.

Welding Requirements

While there are several benefits to welding One-Piece plugs, if not done correctly it could cause damage to the tube sheet or tube sheet holes. As a result, it is critical that a reputable contractor or on-site welder is used to complete the job and avoid costly repairs in the future.

Welding will increase the chance of the plug holding at higher pressures and ensures that the plug has the best seal. Where a traditionally installed one-piece plug can only hold up to 150 PSI, welding will allow it to withstand up to 1,000 PSI. Additionally, if the tube is more corroded, welding will make sure there is a tight seal and prevent leaks or dislodging.

Prior to welding, many end users require that

all plugs have appropriate material certification. For SA-105 plugs, heat lot numbers may also be required. This documentation verifies that the right type of plug is being used and allows for traceability should there be an issue.

Tube Plugging Process

Before installing one-piece plugs, all tubes should be trimmed flush to the tube sheet. Hammering a plug into a projection can cause the tube end to crack and a poor seal. The plug needs to make full contact with the tube sheet to create a good mechanical seal.

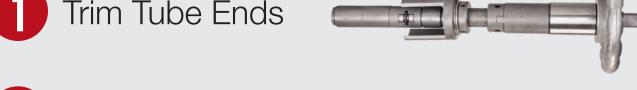

In addition to trimming tubes, it is best practice to clean and vent the tubes that will be plugged. This will get rid of any remaining debris and avoid any future build-up of pressure in the tube. Depending on the industry, venting may not be allowed so it's best to confirm with the manufacturer.

Once the tubes have been prepped, you can start plug installation. The design of the one-piece plug makes them easy to install. The tapered pin is installed by simply tapping the end of the plug into the tube with a hammer or mallet until metal-to-metal contact is made and then advancing it an additional 1/8". Driving the plug all the way into the tube can cause stress on the joint and has the potential of causing damage to the ligament. If this occurs it can cause adjacent tubes to leak. Generally, operators say you'll hear a ringing sound or a ping to let you know that the plug set.

Overall, welding one-piece plugs can be a viable option for many different applications. Whether the tube is corroded, or the user wants the extra seal protection, when done correctly welding can be a great solution. However, it's important to understand what materials and documentation are required to ensure vessel specifications are met. For example, ASME often specifies that SA-105 Carbon Steel be used in welding applications due to its strength under pressure and high temperatures. Additionally, material certifications and heat lot numbers will provide optimal traceability in the event of a failure.

Tube Plug Installation Process

Trim Tube Ends

Clean Tube Ends

Vent Tube

Hammer In One-Piece Plug

Tube Size

Maximum Pressure

- 0.375" to 1.250" OD
- 150 PSI
- 9.5mm to 31.8mm OD

Elliott's Two-Piece Tube Plugs offer more sealing compared to One-Piece Plugs. The tapered pin is driven into the ring, which is tapered on the inside and is parallel to the tube on the outside. This gives even expansion to the ring and a long contact to the seal.

It is good practice to install rings and pins that are the same as or a compatible material to the tube to be plugged. The tube plugs are available in an array of materials to suit your needs: brass, carbon steel, 316 stainless steel, 416 stainless steel, and aluminum (other materials are available upon request). Elliott recommends puncturing the leaky tube with a One-Revolution Tube Cutter. This will ensure the tube is properly vented prior to plugging.

Features & Benefits:

- Better method to plug leaky tubes less labor cost.
- Larger sealing surface less chance for repeat leaking.
- Does not damage the tube sheet no tube sheet repair cost.

Spares & Accessories:

 One Revolution Tube Cutter: Utilize to puncture the tube to ensure the tube is properly vented so pressure cannot build up in the tube and cause the plugs to loosen. See page 182.

^{*} Plugs are only available in 10 packs.

Note: Additional sizes and materials are available upon request. A minimum order quantity may be applicable for these special sizes and materials. Contact Customer Service for details.

Mechanical Tube Plugs

Tube Size

- 0.410" to 1.000" ID
- 10.4mm to 25.4mm ID

Maximum Pressure

• 1,000 or 6,500 PSI

Elliott's mechanical plugs create a positive mechanical contact seal up to 1,000 PSI (68.95 bar) or 6,500 PSI (448.2 bar), making them ideal for medium and high pressure applications such as feedwater heaters and other high pressure heat exchangers over 200 PSI (13.8 bar) and is compliant with ASME PCC-2-2015. As the most secure method to plug leaky tubes, they can also be used in low pressure applications for peace of mind.

Elliott's mechanical plugs have been used by customers for more than 30 years. Our proven design makes them the most secure method to plug leaky tubes. Setup of the mechanical plug is quick and easy because the plug is installed without a hydraulic ram. With only a plug and hand torque wrench, the operator is ready to plug tubes. Simply insert the plug into the tube and expand with a standard 3/8" drive torque wrench. The plug will expand approximately 0.030" (0.76mm) to provide a positive mechanical contact seal. The one piece design allows operators to easily plug tubes in tight spaces like hemispherical heads, baffle plates, and dividers.

It is good practice to install tube plugs that are the same as or a compatible material to the tube and tube sheet. The tube plugs are available in an array of materials to suit your needs: brass, carbon steel, stainless steel, titanium, Monel, and copper nickel. Elliott recommends puncturing the leaky tube with a One-Revolution Tube Cutter. This will ensure the tube is properly vented prior to plugging.

Expansion Ferrule Anti-Spin Eccentric Cam Serrated Sealing Area Hex Capture Driver Drive Screw

Patented Hex Drive Capture System

New hex drivers have a spring loaded tang that captures the plug onto the end of the drive preventing it from falling off into the heat exchanger tube.

Features & Benefits:

Peace Of Mind

Most secure method to plug leaky tubes. No welding required.

Expands In Tube

Can be installed into hard to reach areas and at any depth of the tube sheet, avoiding severely corroded areas on the tube sheet face.

Low Investment

No expensive capital equipment required.

Protects The Tube Sheet

Wide sealing zone ensures a positive seal with a gradual and symmetrical torque expansion – Eliminates thermal and mechanical shock to the tube sheet.

Mechanical Tube Plugs

Quality Assurance:

Tested to meet or exceed all of the following industry standards:

| Industry Standards |
|--|
| ASME B31.3 |
| ASME Section VII Division 1 |
| CSA B51 |
| CSA Z662 |
| TEMA |
| CAN/CSA 285.0 6.1.6 Cat H |
| ASME PCC-2-2015 |
| ISO-9001: 2008 Standards for: ASME Section VII API 660 Alberta (ABSA) Ontario (TSSA) |

www.elliott-tool.com/mechanical-tube-plugs/

Spares & Accessories:

- Tube Prep Brushes, see page 174
- Brush Extensions, see page 177
- Mechanical Plug Removal Kit, see page 177
- Torque Wrench, 8830TW: Use to install the high pressure tube plug into the tube.
- One Revolution Tube Cutter: Utilize to puncture the tube to ensure the tube is properly vented so pressure cannot build up in the tube and cause the plugs to loosen. See page 182.

Specifications:

- Pressure: 1,000 PSI (68.95 bar) or 6,500 PSI (448.2 bar).
- Temperature: Up to 1,750°F (954.4°C).
- Standard Reach: 5" for 1/4" and 5/16" drive, 6-1/2" for 3/8" drive.

Install & Remove Elliott's Mechanical Plugs Quickly & Easily. Visit Our Website To Learn More!

^{*} Plugs are only available in 10 packs.

Note: Elliott offers mechanical tube plugs to meet Nuclear ASME Sec. III or ISO 9002 QA specifications.

Additional sizes and materials are available upon request. A minimum order quantity may be applicable for these special sizes and materials. Contact Customer Service for details.

| Required Torque To Set Tube Plug | | | | | | | | |
|----------------------------------|------------------|------|---------|---------|----------------------|-----------|----------|--|
| Plug OD | Brass & Cu-Ni | | Carbo | n Steel | Stainles Titanium | Hex Drive | | |
| (Inches) | in lbs. | Nm | in lbs. | Nm | in lbs. | Nm | (Inches) | |
| 0.410-0.550 | 200 | 22.5 | 250 | 28.2 | 300 | 33.9 | 1/4 | |
| 0.570-0.710 | 250 | 28.2 | 350 | 39.5 | 500 | 56.5 | 5/16 | |
| 0.730-0.980 | 350 | 39.5 | 450 | 50.8 | 600 | 67.8 | 3/8 | |

The range on the torque wrench is 120 – 960 in. lbs.

Tube Preparation:

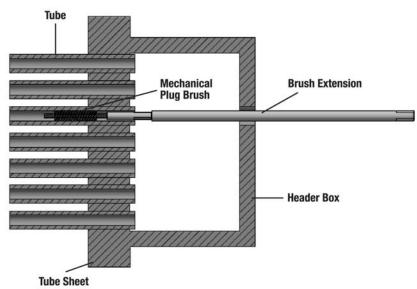

It is highly recommended to clean the tube end prior to plugging. This ensures the surface is free from debris and optimal for positive sealing.

24" Brush Extensions:

Great for reaching through an air cooler header box.

| Brush Range | Brush Extensions, 24" (609.6mm) |
|---------------------|------------------------------------|
| MPB-410 to MPB-570 | MPB-D0375-24 |
| MPB-590 to MPB-1000 | MPB-D0500-24 |

Plug Removal:

Elliott offers plug removal kits to easily remove Elliott's mechanical plugs.

| Measured Tube ID Range | Plug Removal Kits |
|--------------------------------------|-------------------|
| 0.410" - 0.569" (10.41 - 14.48mm) | 8800-312 |
| 0.570" - 0.709" (14.48 - 18.03mm) | 8800-375 |
| 0.710" - 1.000" (18.03 - 25.40mm) | 8800-500 |

Plug Removal Kit Includes:

- Threaded Rod
- Easy Out
- Slide Hammer
- Hex Jam Nut
- Fender Washer

Boiler Tube Removal HOW TO CREATE AKING HOLE

With a variety of boiler tube removal methods out there, it can be difficult to determine the best approach for your application. Depending on the amount of expansion, age of the tube, and other wear factors, tubes can be extremely difficult to get out. Removing tubes through a king hole can be an easier method of removal, especially for operators with varying experience levels.

Removal Process Checklist

- 1. Identify the king hole on both sides of the vessel
- 2. Cut the king hole tube on both sides of the vessel
- 3. Use a knockout tool and gun to remove the tube stubs
- 4. Expand the tube sheet hole ID using ~ 1/16" undersized tool
- 5. Retrieve the tube and stubs using a small rod or tube
- 6. Repeat the removal & retrieval process from bottom to top
- 7. Install tubes as normal
- 8. Plug or ferrule the king hole with a new tube

A "king hole" is the lowest, southern most tube in a boiler tube sheet pattern. This spot should be identified on both sides of the vessel and will be the first tube that is removed. Essentially, the process calls for expanding the tube sheet hole and using the king hole to fish out cut tubes & stubs. It's important to note that this style of tube removal will only work on a straight tube boiler without baffles. If baffles are present, the tubes will not be able to drop to the bottom of the unit for removal, so another method will need to be used.

The removal process consists of only a few steps. First, you'll need a boiler tube cutter, pneumatic hammer or bump gun, an expander, and a small rod or pipe. When choosing an expander, it's important to choose one that is ~1/16" undersized for the tube sheet hole ID. So, if the tube sheet hole is 2", you'd want to use a 1-15/16" expander. Once you have the necessary tooling, cut both ends of the tube in the king hole location. This will drop the middle piece to the bottom of the vessel. Then, punch out the tube stubs using a knockout tool and bump gun. After the tube has been completely removed from the king hole, take the expander and roll the tube sheet hole on both sides. This will create an opening that is just slightly larger than the tube OD.

Using a rod or a smaller tube, an operator can fish out the loose tube and tube stubs through the king hole to pull them out. The cutting & retrieval process would be repeated for each tube, working from the bottom row up. It's important not to cut too many tubes at one time, as it can make it more challenging to remove the tubes from inside the vessel.

Once all the tubes have been removed from the vessel, installation will be quick. The only consideration is how to handle the king hole. Since the tube sheet hole is now slightly oversized, one of two options can be used. One method is to plug the tube sheet hole and weld it in place. This is beneficial if you have a welder on site who can take care of that. The second option is to ferrule the tube. This is when a larger tube stub is used to fill the tube sheet hole, and the standard tube is rolled into the stub.

Overall, this process can make the removal process easier and is a great option if the boiler cannot be removed from the shell or holes cannot be cut into the shell. Since most boiler removal processes involve some type of hydraulic equipment or heating tools, the king hole method eliminates the need to fight with larger equipment and uses what's already on site.

9060 Series

One-Revolution Tube Cutter

Tube Size

- 0.375" to 2.500" OD
- (9.525 to 63.5mm) OD

Let the revolution begin.

Elliott's 9060 One-Revolution Series tube cutters are unlike any other one-revolution cutter. Using more advanced engineering principles the cutter and blade have been designed to last longer, withstand more wear and require less force to cut the tube.

Elliott's One-Rev is for hand use only with the employment of a ratchet or wrench. The 9060 One-Revolution Series tube cutters can be used for both cutting a tube for removal and puncturing the tube for venting prior to plugging.

The One-Revolution Tube Cutter is available in have a 6" (152.4mm) & 12" (304.8mm) reach. The Cutting Blades are manufactured from premium quality tool steel. For longer reach cutters, contact Customer Service for details.

Features & Benefits:

- Increased tool life engineered to last longer than any other cutter and blade.
- · Quick setup and use greater productivity.
- Hex head drive lower capital investment for drive motor.

Spares & Accessories:

- Cutter Blade
- Cutter Pin
- Cutter Lubricant: P8790A for 4 oz (0.118 liter) or P8790B for 1.000 gallon (3.785 liter). Recommended to maximize cutter blade life when applied to blade.

9060 One-Revolution Series Tube Cutter includes:

- Cutter Blade
- Cutter Pin

Using the 2 one rev cutters Elliott provided, our guys vented 128 1" x 0.134 Wall (10 BWG) tubes without breaking a single cutting blade.

-Mike Menzel, General Superintendent CIMS Ltd.

^{*} Intended for puncturing only, cannot be used to cut tubes. NOTE: Some thick wall tubes cannot be cut with the One-Rev cutter, but can still be punctured. This is due to the large material ribbon that is produced during cutting that can catch on adjacent tubes, preventing the cutter from fully rotating.

PTTC Series

Push Type Tube Cutter

Tube Size

- 0.375" to 2.500" OD
- (9.5 to 63.5mm) OD

Elliott's PTTC (Push Type Tube Cutter) Series Cutters accommodate heat exchangers and boilers with tube OD sizes 0.375" to 2.500" (9.5 to 63.5mm) with tube sheets 5" (127.0mm) to 12" (304.8mm) thick. The adjustable collar allows tubes to be cut or scored just beyond the tube sheet. The cutting blades are specially coated to increase longevity. Elliott offers two blade styles for Non-Ferrous Steel and Stainless Steel to achieve optimum cutting efficiency.

Each PTTC Tube Cutter Assembly is supplied with an installed blade, complete pilot set, and Allen wrenches.* The 1/2" hex drive shank on cutters up to 1" OD allows the use of common Jacobs drill chucks for driver connection. 1-1/4" to 2-1/2" OD cutters require a 3/4" square drive and adapter.

*The 3/8" (9.5mm) PTTC Tube Cutter Assembly does not require pilots.

Features & Benefits:

- · Quick setup and use greater productivity.
- · Includes complete pilot set for wide range of gauges lower tooling expense.
- Hex head drive on cutters up to 1" OD lower capital investment for drive motor.

PTTC Series Tube Cutter Kits include:

- Tube Cutter
- · Cutter Blades with Pin
- Tube Cutter Pilots (For sizes 5/8" to 2-1/2" (15.9mm to 63.5mm))

- Non-Ferrous/Steel Cutter Blades
- Stainless Steel Cutter Blades
- Cutter Lubricant: P8790A for 4 oz (0.118 liter) or P8790B for 1.000 gallon (3.785 liter). Recommended to maximize cutter blade life when applied to blade.
- Electric and Pneumatic Tube Cutter Drive Motors:
 - Morse Taper Adapter: Included with Electric Drive Motor
 - Drive Socket: Included with Electric Drive Motor
 - Jacobs Chuck

| 447000-220 | 3/8"-2 1/2" | Electric (220V) | 60-140 200-470 | 50/60Hz, 8 Amp | 16lbs (7.3Kg) | | | | |

447000 & 447000-220 electric motors include:

- 5/8" (15.9mm) Jacobs Chuck
- 3/4" (19.1mm) Square Female Socket Adapter
- Morse Taper Adapter

P5154 & P5476C pneumatic motors include:

• 1/2" (12.7mm) Jacobs Chuck

- 830-12-3-075 Morse Taper Adapter
- 71S0C 3/4" (19.1mm) Square Female Socket Adapter
- 4470JA Jacobs Chuck for the 447000 and 447000-220 electric motors
- 40-80700021-2 Spare Carbon Brush Set for the 447000 and 447000-220 electric motors
- P5476CH Jacobs Chuck for the P5154 and P5476C pneumatic motors

^{*}Included with cutter blade but can be purchased separately.

^{**}The 3/8" (9.5mm) PTTC Tube Cutter Assembly does not require pilots. To be used only with P5154 drive motor.

300 Series **Boiler Tube Cutter**

Tube Size

- 2.000" to 3.000" OD
- (50.8 to 76.2mm) OD

Elliott's 376 / 396 Series Boiler Tube Cutters are power driven to cut tubes in firetube and watertube boilers. The Series' primary purpose is to cut tubes to length on the common end of a firetube boiler. It is extremely important to cut tubes to a uniform length prior to beading the tubes with a roll beading expander.

The 376 / 396 Boiler Tube Cutters have a 1" (25.4mm) male square drive that is easily adapted to tube rolling motors that are 150 RPM or less. The cutters may also be employed with a ratchet for applications in space restricted areas.

The wheel style boiler cutters are designed to have a long tool life, giving you years of trouble-free service.

Features & Benefits:

- Rugged tool design long tool life.
- Places tube to length before rolling reduces operator
- · Creates a non-abrasive cut which:
 - Eliminates prep time less labor costs.
 - Operator can easily insert new tubes less labor costs.
- · Cuts tubes chip-free so no need to clean out vessel less labor costs.

Spares & Accessories:

- Cutter Blade
- 37419P20000 Cutter Pin
- Feed Wedge
- 374170-20000 Feed Rod
- Drive Motors: Low RPM (≤150) motors are highly recommended for use with boiler tube cutters. Options include 447000 (see page 185), -90 right angle motors (see page 70), or 99300 series motors (see page 60).
- Drive Socket required for use with Drive Motor. See page 73 for more information.

Boiler Tube Cutter includes:

- Cutter Wheel
- Cutter Pin
- Feed Wedge
- Feed Rod

Standard Cutter Inserts

Tube Facing & Strength Weld Inserts

COMING 2024!

Elliott's cutting inserts are designed to quickly remove welded tube ends and trim tubes flush to the tube sheet. Featuring a variety of geometric shapes and coatings, each insert is optimized to perform in a specific cutting application, providing a smooth and accurate finish.

These cutting inserts are commonly used to help maximize tool life in milling applications and can handle a wide range of materials including aluminum, steel, and titanium.

Other sizes and coatings are available upon request.

Features & Benefits:

- Precise cutting for complex workpieces
- Easy changeover design reduces downtime
- Ability to withstand high temperatures and speeds prolongs tool life, reducing consumable costs
- Reduces vibration during cutting, resulting in a smoother finish

Cut tough jobs down to size.

Equipped with a rugged Baldor® Motor and the highly productive Automatic Cutting Force Control, Elliott's SpeedCut is a quick and cost effective way to cut through tube bundles and shells in a single pass.

It features a heavy-duty frame and powerful drivetrain to withstand the rigors of a production environment. Safe and efficient operation is possible without the need for a constant attendant.

The unit offers Automatic Cutting Force Control as a standard feature. The cutting cross section of the vessel is smaller at the top and bottom rows because there are fewer tubes per row. During larger portions of the cutting cycle the saw feed automatically pauses while maintaining constant cutting force. The result is that overall cutting time is reduced without sacrificing blade life.

Setup is easy. Simply position and secure the tube bundle to the Tube Sheet Support Table (an optional Bundle Support Table is available to support the rest of the bundle). If necessary the operator can adjust the blade tension with a simple torque wrench. Minimal attendance by the operator of the unit is enabled by three control systems that constantly monitor the cutting cycle. Should the blade break or stall, the system automatically stops the blade.

An MQL (Minimum Quantity Lubricant) Mist Lubrication System is a standard feature on the SpeedCut. A very thin film of lubricant is spread on the teeth of the blade just before the blade contacts the tube. As the heat from the cut is absorbed by the lubricant, the liquid is dissipated from the blade and the resulting chip. Environmental hazards and disposal costs are minimized, the cutting speed is increased, and the blade life is prolonged.

Features & Benefits:

- The Hydraulic Feed Rate Control combined with the Automatic Cutting Force Control optimizes saw feed while maintaining consistent cutting force.
- Powerful 7.5 HP or 10 HP Baldor® Blade Drive Motor quickly cuts through a wide variety of tough materials.
- Heavy Duty Cone Drive® gearbox with powerful "Double Enveloping"® gear set for increased torque.
- Low voltage operator controls front mounted and easily accessible to operator.
- Remote Pedestal Control Console for added safety and convenience.
- · Convenient digital band speed display.
- Control Legend Plates in English or Spanish (other languages available upon request).
- Hour Meter: Allows for more precisely scheduled preventative maintenance which lowers operating costs.
- · Includes Machine Leveling Bolts.
- Three control systems and Blade Break/Stall Proximity Switch features enable safe unattended operation.
- Overload and under voltage protection.
- Maintenance Lockout for operator safety and protection during maintenance.
- MQL Mist Lubrication System to minimize disposal costs and prolong blade life.
- Tube Sheet Support Table & Ratchet Straps: Helps to secure the bundle during cutting operation.
- Rotary Blade Brush cleans and extends blade life.

- Bi-Metal Bandsaw Blades: Long-life, high quality blades for most materials, including copper, stainless steel and exotic materials.
- Clamp System: Allows for improved stability of the tube sheet during the sawing process and an added measure of safety for the crew and the machine.
- Bundle Support Table: Provides support for the end of the bundle while the other side is cut.
- MQL System Lubricant: Specially formulated for use with the SpeedCut.
- Recommended Spares Kit: Includes spare maintenance parts for quick replacement and no downtime. Includes: Blade Brushes, Drive Belt, Gear Oil, Bearings, Fuses, Roller Axles, and Roller Supports.

Automatic Cutting Force Control

Cutting Speed

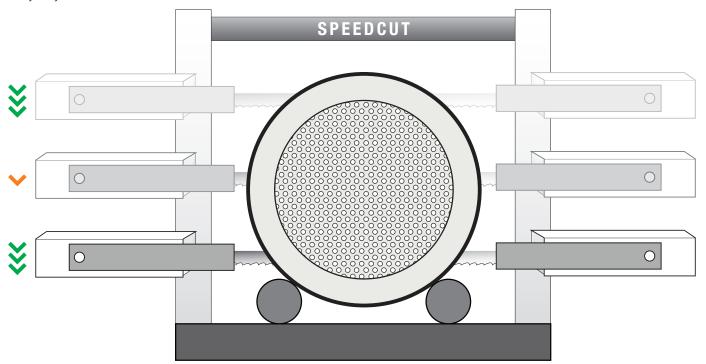

Heavy Duty Gearbox

Safety Shutoff Sensor

Automatic Cutting Force Control:

During larger sections of the vessel, the saw feed automatically pauses while maintaining consistent cutting force to increase productivity without sacrificing blade life.

Collet Tube Puller

Tube Size

- 0.625" to 1.000" OD
- (15.9 to 25.4mm) OD

Elliott's Model B10552-00 Collet Tube Puller was designed for fast and efficient tube removal in condensers, chiller, and other heat exchangers.

With its 6 Ton pulling capacity, the Collet Tube Puller automatically grips, pulls, and releases the tube in a matter of seconds. The puller's compact design allows access to confined work areas. Additionally, the 360° Positioning Handle enables access to those hard-to-reach tubes that are near channel plates and water box conditions.

The Collet Tube Puller can quickly and successfully pull over 100 tube stubs in less than an hour! To allow for even faster tube pulling, use Elliott's Cyclgrip Semi-Continuous Tube Puller – the perfect partner for the Collet Tube Puller.

Features & Benefits:

- Quick stroke cylinder increases productivity.
- Lightweight pulling ram reduces operator fatigue.
- Wide gripping range less tooling expense.
- 360 degree positioning handle more access to tubes.

Spares & Accessories:

- M5783-00 110V Electric Hydraulic Pump: You must have this pump in order to properly operate the Collet Style Tube Puller.
- M5783-00-220 220V Electric Hydraulic Pump: You must either purchase or already have this pump on order to properly operate the Collet Style Tube Puller.
- Tool Kit: Consists of a Collet Set, Draw Bar, and Nose Piece
- Collet Set*: Consists of a Collet, Flat Spring, and an O-ring.
- Draw Bar*
- Nose Piece*
- TCB20-33 Counter Balance
- 17-300576 Seal Kit
- * Required to operate the Collet Puller

Specifications:

- Pulling capacity: 6 Ton
- Stroke: 3" (76.0mm) Pulling Stroke 2.25" (57.2mm)
- Weight: 25 Lbs. (11 Kg)
- Overall Length:
 - Retracted: 20.5" (520.7mm)Extended: 21.75" (552.6mm)

B10552-00 Collet Style Tube Puller kit includes:

- B10552 Collet Tube Puller Assembly
- B10552D5-750 Collet Retainer for 5/8" (15.9mm) and 3/4" (19.1mm) tube ODs
- B10552D7-750 Pull Rod for 5/8" (15.9mm) and 3/4" (19.1mm) tube ODs
- B10552D5-1000 Collet Retainer for 7/8" (22.2mm) and 1" (25.4mm) tube ODs
- B10552D7-1000 Pull Rod for 7/8" (22.2mm) and 1" (25.4mm) tube ODs
- B10552D20 15 ft. (4.6M) Hydraulic Hose Assembly

**Includes a Collet Set, Draw Bar, and Nose Piece.

Super Collet Tube Puller

Hole Size

- 0.50" to 2.50" OD
- (12.70 to 63.5mm) OD

Powerful Grip For Fast Tube Pulling.

With the same gripping power of Elliott's proven spears.

Elliott's super collet tube puller is designed to quickly pull tube stubs from tube sheets without damaging the tube sheet hole. The collet teeth have been designed using the same principles as Elliott's proven TT Spear. Offering the gripping power of a spear with the speed and convenience of a collet.

The super collet tube puller is powered by an electric or pneumatic hydraulic pump to provide up to 25 tons of pulling capacity. Available in 2 pulling heads to cover tube sizes from $\frac{1}{2}$ up to 2-1/2".

| Puller Specifications | | | | | | | |
|-----------------------|---------------------|--------|----------------|--------|--|--|--|
| Puller | Requirements | Stroke | Pulling Stroke | Weight | | | |
| CPS15 | 15 Ton @ 10,000 PSI | 0.75" | 0.00" | 40 lbs | | | |
| CPS25 | 25 Ton @ 10,000 PSI | 6.75" | 6.00" | 55 lbs | | | |

Collets Offer Powerful Spear-Like Gripping Power

Vertical Or Horizontal Eye Bolts

Built-in Pump Control

Quickly Remove Tube Stubs

Robust & Powerful For Fast Tube Removal

Just insert the collet and quickly remove the tube stub.

Save Hours Of Machine Time

Pull stubs easily without the need to machine the tube ID for knockout.

Protects The Tube Sheet

Don't risk damaging tube sheets from drilling and/or tube knockout tools.

No spears!

One step operation lowers cost and saves time by avoiding inserting, removing, and breaking spears as you pull.

Safe & Simple For Operators

One-Man Operation

Convenient pump control is built into the handles and works seamlessly with Elliott's electric hydraulic pumps.

Easy To Use

Eye-bolts for easily connecting to a counterbalance in both horizontal or vertical pulling applications.

Improves Safety

The deflector shield protects the opposite end of tube sheet during horizontal pulling applications.

Package Includes:

- Pulling Head
- Two Hydraulic Hoses
- Deflector Shield: CP300

Spares & Accessories:

- Collet
- Draw Bar
- Tie Rod
- Nose Piece
- Counterbalance: TCB48-66
- Hydraulic Pump Retrofit Kit: M5773RFK (Allows existing M5773-00 & M5776-00 pumps to be used with the Super Collet Puller)

Pumps:

- 110V: M5773-00 (See page 192)
- 220V: M5776-00 (See page 192)
- Pneumatic: M5775-00* (See page 192)

^{*}Does not work with side handle buttons.

Faster Tube Removal

With The Elliott Cyclgrip Semi-Continuous Tube Puller

AREVA expects to double the tube removal speed by using the Elliott Cyclgrip tool. Since this tool only requires two people, AREVA can use other personnel more effectively.

AREVA performed speed and load tests on the Elliott Cyclgrip tube removal tool... The purpose of these tests was to determine the pull speed at various loads and the maximum tool load. The tube material used during testing was either 3/4" x 0.035" wall stainless steel or 3/4" x 0.049" wall copper.

Based on the results, AREVA plans on using a custom designed jaw and the Elliott Cyclgrip setup for field work.

AREVA expects to double the tube removal speed by using the Elliott Cyclgrip tool. In addition, since this tool will only require two people to operate (one running the tool and the other managing the tube that is being removed), AREVA can use other personnel more effectively to perform other tasks associated with the retubing operation.

Michael Mansfield Program Manager Heat Exchanger Services AREVA NDE-Solutions, North America AREVA, Inc.

Tube Size

- 0.500" to 1.000" OD
- (12.7 to 25.4mm) OD

Elliott's M5630-00 Cyclgrip Semi-Continuous Tube Puller is an engineered product that continuously pulls chiller, heat exchanger, and condenser tubes after the tubes have been pulled free from the tube sheet, making it the ideal companion for the Collet Style Tube Puller.

The Cyclgrip's unique design allows it to adjust to tube sizes without any additional tooling or tool adjustments. The puller's slim profile allows side tube mounting adjacent to water box and channel plates.

Additionally, the Cyclgrip easily pulls tubes that have been expanded into baffle or support plates, eliminating the use of tiresome slam hammers and accelerating the tube removal.

Features & Benefits:

- Lightweight & compact design easy to move in tight
- 10 ft (3.3M) per minute pulling action greater productivity.
- Simple design easy to maintain.
- No extra tooling required lower tooling expense.

Specifications:

- Pulled tube projection required: 3" (76.2mm)
- Face plate dimensions: 3.75" (95.3mm) wide x 2.94" (74.7mm) high
- Stroke length: 5" (127.0mm)
- Pulling rate: 10'/min. (3.3M/min.)
- Height: 10.75" (273.0mm)
- Length: 8.44" (214.4mm)
- Width: 4.13" (104.9mm)
- Weight: 16 Lbs. (7.3 Kg)

M5630-00 Cyclgrip Semi-Continuous Tube Puller package includes:

- Extractor Unit
- 15 ft (4.6M) Hydraulic Hose
- Control Cable
- Carrying Case

- *M5783-00 110V Electric Hydraulic Pump: You must either purchase or already have this pump on order to properly operate the Cyclgrip.
- *M5783-00-220 220V Electric Hydraulic Pump: You must either purchase or already have this pump on order to properly operate the Cyclgrip.
- TCB20-33 Counter Balance.

^{*} Required to operate the Cyclgrip.

Tube Tugger

Semi-Continuous Hydraulic Tube Pulling System

Elliott's Tube Tugger is a powerful semi-continuous hydraulic tube pulling system for removing tubes from heat exchangers, chillers, and other heat transfer vessels.

With its 30 Ton pulling capacity, the Elliott Tube Tugger breaks expanded tube sheet joint bonds. The tugger then takes over and continuously pulls the tube when any obstructions are met. In many applications, tubes can be pulled from both tube sheets from one end of the heat exchanger.

The Tube Tugger's compact length of 15" (381.0mm) allows it to be used in confined space areas. For close clearance conditions or for extended reach, Nose Piece Extensions are available. Contact Customer Service for details.

Features & Benefits:

- Portable ram & pump easy to move in tight areas.
- · High production pulling action lower labor cost.
- Best value more productivity & less capital investment.

Tube Tugger kit includes:

- Tube Pulling Hydraulic Cylinder
- Suspension Bracket Assembly with Side Handles
- Collet Holder Assembly
- (2) 15 ft. (4.6M) Hydraulic Hose
- Release Fork
- Nose Piece Adapter
- Set of Spanner Wrenches

Spares & Accessories:

- Hydraulic Pump: M5773-00 110V Electric Pump, M5776-00 220V Electric Pump, M5775-00 Pneumatic Pump. You must either purchase or already have one of these pumps in order to properly operate the Tube Tugger.
- TCB48-66 Counter Balance
- 17-300077 Seal Repair Kit
- Spears See page 205. *
- Collet Set See table on page 205. *
- Nose Piece See table on page 205. *

* Required to operate the Tube Tugger

Super Tube Tugger

Semi-Continuous Hydraulic Tube Pulling System

Tube Size

- 1.500" to 2.000" OD
- (38.1 to 50.8mm) OD

Elliott's Super Tube Tugger is a powerful semi-continuous hydraulic tube pulling system for removing tubes from surface condensers and certain boiler applications.

With its 60 Ton pulling capacity, the Elliott Super Tube Tugger breaks expanded tube sheet joint bonds. The tugger then takes over and continuously pulls the tube when any obstructions are met.

The Super Tube Tugger's compact length of 18" (457.0mm) allows it to be used in confined space areas.

Features & Benefits:

- Portable ram & pump easy to maneuver in tight areas.
- High production pulling action lower labor cost.
- High tonnage makes difficult job easy.

Specifications:

- Capacity: 60 Ton (54.4Mt).
- Stroke: 4.000" (101.0mm).
- Tugger Diameter: 8.500" (215.9mm).
- · Lengths:
 - Collapsed: 18.000" (457.0mm).
 - Extended: 22.000" (559.0mm).
- Length Across Handles: 18.250" (464.0mm).
- Weight: 62 Lbs. (28.0Kg).

80-40200 Super Tube Tugger kit includes:

- Tube Pulling Hydraulic Cylinder
- Suspension Bracket Assembly with Side Handles
- Collet Holder Assembly
- (2) 15 ft. (4.6M) Hydraulic Hose
- Release Fork
- Nose Piece Adapter
- Set of Spanner Wrenches

- Hydraulic Pump: M5773-00 110V Electric Pump, M5776-00 220V Electric Pump, M5775-00 Pneumatic Pump. You must either purchase or already have one of these pumps in order to properly operate the Super Tube Tugger.
- TCB66-88 Counter Balance

- Nose Piece See table on page 205. *

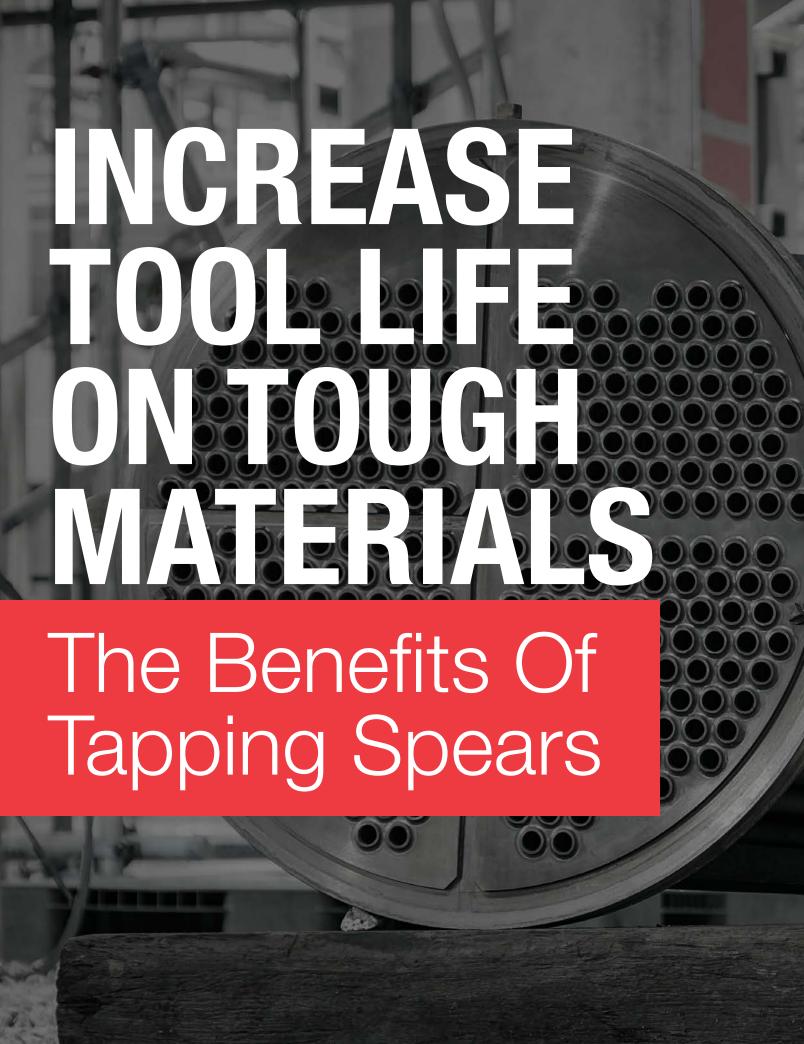

^{*} Required to operate the Super Tube Tugger

Optional Counterbalance

In recent years, the use of exotic materials in heat exchanger tubing has become a lot more common. Despite having a higher price tag, these materials are often chosen due to their ability to withstand corrosion and maintain longer tube life. While these materials are great for working in tough conditions, they can have be very challenging to work with as they often require more tooling and job time. This is especially true in tube removal where pulling spears are used. Tapping spears have become an effective way to overcome many of these issues.

While spear pulling has its pros and cons, the largest issue customers face is using them on harsher materials. Monel, Hastelloy, and Duplex are some of the most common exotic materials customers may encounter on the job. Traditionally, spear pulling consists of threading a spear into a tube using an impact drill, then pulling it out with the use of a hydraulic cylinder. However, since these exotic materials have such a high hardness, it can cause premature damage to spear threads when they're impacted into the tube. Over time, the force of the impact combined with the tube material hardness can wear away the pulling teeth of the spear. This results in poor spear performance and increases consumable costs.

One method that operators have had success with is through using tapping spears on tough applications. A tapping spear is like a pulling spear but has a shorter reach and is manufactured to meet a higher material hardness. The higher hardness allows the spear to hold up longer when used on exotic materials. Note, this is

not typically recommended for use in standard carbon steel or stainless applications, as it adds an unnecessary step to the removal process.

To use a tapping spear, the operator should thread it into the tube using a hand wrench or ratchet. This will create the teeth pattern in the tube ID, that will allow the spear to thread into it. Once it's driven in, the operator can remove the tapping spear and insert a standard pulling spear. The pulling spear should be hand threaded into place to avoid excess wear. With the pulling spear in place, the process can be performed as normal using a hydraulic puller. While this adds an extra step, many customers will have an operator go through with the tapping spear and have another operator following behind with the puller to help speed up the operation.

Using a tapping spear in the removal process can help save on consumable costs, as one tapping spear can cover 50-75 tubes. This also helps maintain the pulling spears tool life, allowing the operator to get the most out of the spear before having to switch. This is significantly better than some customers who were getting about 8-10 tubes per spear when using the pulling spear on its own.

Overall, exotic materials can make the process of tube removal more challenging. From decreased tool life to increased labor time, the total cost of the job can jump significantly. Incorporating tools like a tapping spear into your process can decrease the amount of labor and costs incurred on these tougher jobs.

Tapping Spears

Tube Size

- 0.625" to 1.000" OD
- (15.9 to 25.4mm) OD

Elliott's TT Series Tapping Spears are designed to withstand the toughest tube removal applications, for longer tool life on exotic materials.

Used in combination with Elliott's TT pulling spears, tapping spears are manufactured to meet a higher material hardness, allowing them to hold up longer when used on exotic materials. Simply thread the tapping spear into the tube end to create a tooth pattern in the tube ID. Once it's been driven in, remove the tapping spear and insert a standard pulling spear and remove the tube as normal.

Features & Benefits:

- Save on tooling costs by prolonging the life of pulling spears.
- Harder material allows for a better grip on exotic tube materials.

Spares & Accessories:

 P8788 Spear Lubricant: Highly recommended for use on spear threads to greatly increase spear life.

TT Tube Spears

Tube Size

- 0.625" to 2.000" OD
- (15.9 to 50.8mm) OD

Elliott's TT Spears are used with the Elliott Tube Tugger or Super Tube Tugger to successfully pull tubes in chillers, heat exchangers, condensers, fin fan coolers, and boilers.

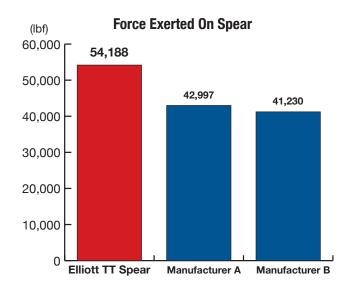

Simply size the spear, apply spear lubricant on the pulling teeth, and then set the spear by employing a hand ratchet or impact wrench. To relieve pressure, back the spear off and then employ the Tube Tugger or Super Tube Tugger to successfully remove the tube.

Features & Benefits:

- Reduce tooling costs with an innovative design that withstands significantly more force than other spears.
- Engineered design lowers the chance that the gripping end of the spear will break off in the tube, saving time, money and hassle.

 P8788 Spear Lubricant: Highly recommended for use on spear threads to greatly increase spear life.

Stub Tugger Hydraulic Tube Pulling System

Tube Size

- 0.375" to 3.000" OD
- (9.5 to 76.2mm) OD

Elliott's Stub Tugger is a powerful hydraulic tube pulling system for removing tubes from heat exchangers and certain boiler applications.

The Elliott Stub Tugger is compatible with other competitive spear type tube pullers and its compact length of 22" (559.0mm) allows it to be used in confined space areas.

Features & Benefits:

- Extensive OD tube range more versatility.
- Uses E-series spears lower tooling cost.
- Hydraulic Cylinder Strike Plate tool can be used as a slide hammer while still protecting the piston and seals, which increases convenience and efficiency.

Specifications:

- Capacity: 30 Ton (27.2Mt).
- Stroke: 6.000" (152.4mm).
- Tugger Diameter: 6.500" (165.1mm).
- · Lengths:
 - Collapsed: 18.000" (457.0mm).
 - Extended: 22.000" (559.0mm).
- Length Across Handles: 18.250" (464.0mm).
- Weight: 46 Lbs. (20.9Kg).

80-40130 Stub Tugger kit includes:

- Tube Pulling Hydraulic Cylinder
- Suspension Bracket Assembly with Side Handles
- Nose Piece
- Nose Piece Adapter
- Load Cap
- Safety Shield
- (2) 15 ft. (4.6M) Hydraulic Hose

- Hydraulic Pump: M5773-00 110V Electric Pump, M5776-00 220V Electric Pump, M5775-00 Pneumatic Pump, or 80-36102D3 Hand Pump. You must either purchase or already have one of these pumps in order to properly operate the Stub Tugger.
- TCB48-66 Counter Balance
- 17-300822 Seal Repair Kit
- Spear See table on page 210.
- Spear Extension See table on page 207.
- Extension Chair (Required when using any extensions)
 See table on page 207.
- 80-3055-3-00 Spear Adapter See table on page 207.
- 80-3055-4 Horseshoe Lock See table on page 207.

Spear and accessory items for tube OD sizes 3/8" (9.5mm) thru 1" (25.4mm).

Optional Spear Extensions Available

Recommended to allow the operator to work from the outside of the water box and channel plate applications. If using an extension, both the extension chair & spear extension are required.

Spear items for tube OD sizes 1-1/4" (31.8mm) thru 2-1/2" (63.5mm).

All parts below are required for use.

Spear Accessories:

| Spear Accessories | | | | | | |

Manual Tube Puller

Tube Size

- 3/8" to 1" OD
- (9.5 to 25.4mm) OD

Elliott's Model 904500 Manual Tube Puller is ideal for pulling a limited number of tubes in heat exchangers, chillers, fin fan coolers, and surface condensers.

The Manual Tube Puller incorporates a socket and thrust bearing to allow for use with an impact wrench. Elliott's manual tube puller is a great value because the puller works on tube ODs 3/8" to 1" (9.5 to 25.4mm), so all you need to purchase is a nose piece for each tube OD. E Series spears must be purchased separately.

The easy to use 904500 Manual Tube Puller allows you to pull tubes at a minimum tooling cost.

Features & Benefits:

- One puller accommodates tube OD sizes 3/8" to 1" (9.5 to 25.4mm) only need to purchase nose piece.
- Uses standard spears lower tool cost.
- Minimum investment lower tool cost.
- Manual tool no capital expense for pump & ram.
- · Compact easy to store.

- Spears See table on page 210.*
- Nose Piece*

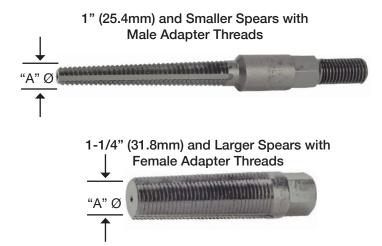

| Tube OD | Nose Piece |
|---------|------------|
| 3/8" | 904502-05 |
| 1/2" | 904502-04 |
| 5/8" | 904502-01 |
| 3/4" | 904502-02 |
| 7/8" | 904502-06 |
| 1" | 904502-03 |

^{*} Required to operate the Manual Tube Puller

Tube Size

- 0.375" to 3.000" OD
- (9.5 to 76.2mm) OD

Elliott's E Series Hex Spears are used with the Elliott Stub Tugger or Manual Tube Puller to successfully pull tubes in chillers, heat exchangers, condensers, fin fan coolers, and boilers.

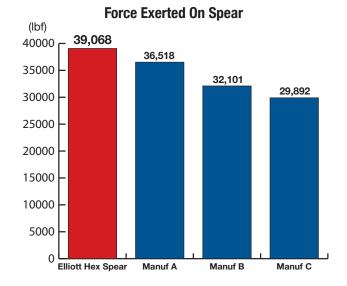

Simply size the spear, apply spear lubricant on the pulling teeth, and then set the spear by employing a hand ratchet or impact wrench. To aid in the removal of the tube stub from the spear, back the spear off and then employ the Stub Tugger or Manual Tube Puller to successfully remove the tube.

Features & Benefits:

- New, innovative design means the best tool life possible at a competitive price.
- The best value spear on the market.
- Each spear is rated to withstand a minimum of 120,000 psi tensile strength to increase pulling capacity and tool life.
- Engineered design lowers the chance that the gripping end of the spear will break off in the tube, saving time, money and hassle.

Spares & Accessories:

 P8788 Spear Lubricant: Highly recommended for use on spear threads to greatly increase spear life.

- (9.5 to 50.8mm) OD

Elliott's 430G Pneumatic Hammer is the recommended driving tool for Elliott's Knockout Tools and Collapsing Tools to remove tube stubs in heat exchangers or beading tubes in firetube boilers.

Knockout Tools are used to punch the tubes out of the tube sheet while Collapsing Tools collapse tubes from one end of a heat exchanger and then the tube is pulled from the other end.

The 430G Pneumatic Hammer accepts Type No. 6 0.680" (17.3mm) diameter by 2-3/8" (60.3mm) long shanks.

Features & Benefits:

- Lightweight & compact design easy to move in tight areas.
- Used also for tube collapsing and flaring greater productivity.

Specifications:

- Piston Diameter & Stroke: 1-1/8" X 2" (28.6 X 50.8mm).
- Length (Overall): 14" (355.6mm).
- Blows per minute: 2,300.
- Net Weight: 17 lbs. (7 Kg.).
- Air Requirement: 30 CFM @ 90 PSI.
- Hose Diameter: 1/2" (12.7mm).

430G Pneumatic Hammer package includes:

- Hose Whip
- Filter-Lubricator
- Carrying Case

- 6070 Filter-Lubricator: Included with the 430G Pneumatic Hammer package.
- Knockout Tools
- Collapsing Tools

430G Series

Knockout Tools

Elliott's Knockout Tools, also known as tube drifts, are used to punch the tubes out of a tube sheet with the 430G Pneumatic Hammer.

The Type No. 6 Shank 0.680 (17.3mm) diameter by 2-3/8" (60.3mm) long with retainer is the standard shank supplied with these tools. Other style shanks are available. Contact Customer Service for details.

| Colla | psing | Tools | |
|-------|-------|--------------|--|

Elliott's Collapsing Tools are used to collapse one end of the tube; then the tube is pulled from the other end of the heat exchanger. Collapsing tools may either be used by hand or with the 430G Pneumatic Hammer.

The Collapsing Tool with the 430G Pneumatic Hammer can also be used as a tube ripper. Simply place the ripping edge of the chisel into one of the flutes of the tube pulling spear and press the trigger, then run the chisel down the spear's flute to the end. The tube can then be easily removed from the spear by hand.

The Type No. 6 Shank 0.680 (17.3mm) diameter by 2-3/8" (60.3mm) long with retainer is the standard shank supplied with these tools. Other style shanks are available. Contact Customer Service for details.

Wall-Reducing Tools

Elliott's Wall-Reducing Tools are used to reduce the tube wall in cases where it is necessary in order to remove the tube.

These specially designed tools have a piloted ground nose to keep the drill centered in the tube. The drill is sized to leave approximately .015" tube wall material left in the tube. The remaining tube material can then easily quickly be removed with a companion knockout tool and pneumatic hammer.

430D Series Jumbo Tube Buster

Tube Size

- 0.625" to 2.500" OD
- (15.9 to 63.5mm) OD

Elliott's 430D Jumbo Tube Buster is the recommended driving tool for Elliott's Jumbo Knockout Tools to remove tube stubs in heat exchangers, firetube boilers, and watertube boilers.

Jumbo Knockout Tools are used to punch the tubes out of the tube sheet and are available in either 8" (203.0mm) or 16" (406.0mm) reach. The tools are piloted to prevent damage to the tube sheet.

The 430D Jumbo Tube Buster uses a number 15 shank. The tool features a barrel design that captures the compression piston and the inside trigger feature permits throttle control of the tool.

Features & Benefits:

- Lightweight & compact design easy to move in tight areas.
- Uses retainers on tools improved operator safety.
- Used also for tube collapsing, belling, and flaring greater productivity.

Specifications:

- Piston Diameter & Stroke: 1-3/16" X 8"
- (30.2 X 203.2mm).
- Net Weight: 30 lbs. (13.6 Kg.).
- Air Requirement: 42 CFM @ 90 PSI.
- Hose Diameter: 1/2" (12.7mm) NPT.

430D Jumbo Tube Buster package includes:

- Hose Whip
- Filter-Lubricator
- Carrying Case

- 6070 Filter-Lubricator: Included with the 430D Jumbo Tube Buster package.
- Knockout Tools: Available with 8" (203.0mm) or 16" (406.0mm) reaches.

Elliott's Jumbo Knockout Tools, also known as tube drifts, are used to punch the tubes out of a tube sheet with the 430D Jumbo Tube Buster.

The 430D Jumbo Tube Buster uses shank number 15. The Jumbo Knockout Tools are available in reaches of both 8" (203.2mm) and 16" (406.4mm).

Note: Split Sieeve 430D1 is required for operating 1" (25.4mm) and larger Jumbo Knockout 100is

"The team at Elliott Tool not only sold me exactly what I needed, they took the time to come to my office and train my team on the proper way to use the tools and proper maintenance of the tools... A wise man once told me to surround yourself with successful people and you will be successful. Elliott Tool will always be part of my team!"

-James Williams, Owner Williams Mechanical Services

"Elliott's service has always been good and reliable and replacement parts and consumables are available if we need them."

-Charles Gardinier, Chilling Station Maintenance Supervisor
University of Texas at Austin

"At Trane, we have an unceasing pursuit for improving our manufacturing processes. Having manufacturing partners that are equally engaged is essential to a sustainable future. Elliott Tool Technologies has embraced that role with swift response by leading and providing custom tool solutions to match our continuous improvement goals."

-Max Ford, Manufacturing Engineer Trane Technologies, La Crosse, Wi

"Support was the reason we went with the Elliott equipment. The product is great and the people we worked with have been great."

-Ryan Pitre, Manufacturing Engineer Alfa Laval Inc

"Elliott really paid attention to what I needed to accomplish on the job... Visiting Elliott's solution center allowed me to see several systems first hand, helping us choose a safer and more cost effective method. Their team was also able to provide valuable on-site training to make sure we got the best results out of our tooling."

-Matt Sauls, Project Manager Midwest Environmental Services

Quality Assurance

Elliott Tool Technologies has always stood for quality tube tools. From engineering, manufacturing and quality control Elliott is committed to producing a product that you can be confident in using time after time.

Elliott's Quality

You can rely on Elliott to provide tools that are tougher than the job and are the best in the industry. To achieve this goal, we utilize continuous improvement, Six Sigma and 5-S. Elliott firmly believes the last thing you should have to worry about is the quality of your tools. However, if you require a more formal assurance of quality we do offer the following options.

Certificate of Compliance/Conformance

A Certificate of Compliance/Conformance will certify your tool is manufactured according to our engineer specifications. Some refer to a Certificate of Compliance and a Certificate of Conformance as two separate Certificates; Elliott considers them as one Certificate. Should you require a Certificate of Compliance/Conformance, there is no additional charge. In most cases, customer requests for a Certificate of Compliance/Conformance will not delay the delivery of your tools. Requests for Certificates of Compliance/Conformance must be made at the time of your order.

Materials Certificate

A Materials Certificate certifies the material used to manufacture the tools. The price of a Materials Certificate will vary based on the complexity of the tool. Requests for a Materials Certificate could change availability and delivery time of your tools depending on the complexity of the part. A complete quote for pricing and availability is available upon request. Requests for Materials Certificates must be made at the time of your order.

For more specific information, contact your Elliott sales representative.

I can go to our tube rolling equipment drawers and pull out serviceable rolling equipment that could easily be older than my 62 years!

- Don Poush

"I Need It Yesterday"

Elliott Tool strives to be the industry's leading supplier of *Quality tube tools for an 'I need it yesterday' world.* $^{\text{\tiny TM}}$ Here are the services you can count on.

Catalog Items

Many of the items shown in this catalog are in stock and available for same day shipment when we receive your order on business days before 5:00 PM US Eastern. Orders destined for export or requiring shipment via freight usually can be shipped the next day. If the catalog item is not available for immediate shipment in the quantities you need, we will rapidly explore all of these options:

- Partial shipment to get you started while Elliott manufactures the balance of your needs.
- Expediting your need through the manufacturing process.
- If your need is recurring, revising Elliott's stock accordingly.

If after you have submitted an order to Elliott and later decide you need it sooner, Elliott will do everything possible to meet your needs. Your Elliott sales representative will investigate for free if the item(s):

- Are already available for complete shipment.
- Are available for partial shipment.
- If expediting through manufacturing according to your new need is possible.

If expediting is possible, a service fee of the lesser of \$250 or 25% of the extended amount of the line item(s) being expedited is applied. This service fee helps to defray Elliott's additional costs related to manufacturing rescheduling, overtime labor, and expediting fees Elliott incurs with our suppliers.

Special Items

Elliott Tool welcomes the opportunity to meet your needs for tube tools not included in this catalog and has more than 100 years of development experience to back you up. Normal lead times are 30 business days after receipt of your approval of our design. If your need is more urgent Elliott can usually provide expediting for a service fee of the greater of \$250 or 25% of the extended amount of the line item(s) being expedited. This service fee helps to defray Elliott's additional costs related to manufacturing rescheduling, overtime labor, and expediting fees Elliott incurs with our suppliers.

Should your need for a special item be ongoing then Elliott Tool will commit to understand and supply the items to you according to your forecast. Contact your Elliott Tool sales representative for more information.

Rental Capability

Many of the products in this catalog are available for rent to customers and sites located in the United States and Canada. There are many practical considerations prohibitively affecting rental commerce outside of the United States and Canada but such customers are invited to contact Elliott to discuss ways to overcome them.

Elliott offers daily, weekly, and monthly rental rates. Unless otherwise noted, all quotes are at the weekly rate. Rentals accrue daily, have a 1 week minimum rental period, and will be charged according to the daily, weekly or monthly rate for the rental period. The rental period begins when you receive the item and stops when you ship it back to Elliott.

Upon shipment Elliott will invoice for the first 7 days of rental, any consumable items, and outbound freight. Every 28 days of rent, Elliott will issue a progress bill based on the monthly rate for that item less the pre-paid amount for the first week. After the item is returned, a final bill for any outstanding rent will be invoiced. For rentals that are paid by credit card, a one-month deposit is required. At each progress bill, an additional month will be charged for the next rental period. Once the item is returned, the difference between the pre-charged amount and the actual rental will be credited back to the credit card on file.

Return all rental equipment to:

Elliott Tool Technologies, Ltd Attn: Rental Department 1760 Tuttle Avenue Dayton, OH 45403 United States

A Return Material Authorization (RMA) is not required.

If you choose to purchase a new item, Elliott will credit 50%* of the current rental charges for that item towards the purchase of the same item.

*The maximum credit you will receive towards the purchase of a new tool may not exceed 25% of the Retail List Price of that brand new tool.

If you choose to purchase the rental item, Elliott will credit 50%** of the current rental charges towards the purchase of the used rental item.

**The maximum credit you will receive towards the purchase of a used tool may not exceed 25% of the Retail List Price. (Retail List Price of a rental tool is 15% less than the list price of that of the same tool in brand new condition).

You must notify Elliott of your interest in doing so while the rental period is still open. Please note that some equipment is excluded from this offer.

Repairs of rental equipment due to reasons other than normal wear will be charged to the renter. Rental equipment not returned will be invoiced at Elliott's list price in addition to the rental charges. Consumable items that are returned will be credited in accordance with the customer returns terms and conditions.

Look for the "FOR RENT" stamp at the bottom of the product page.

Recommended Cutting Speed Specifications

Revolutions Per Minute

To obtain maximum cutting performance and cutter blade life, refer to the table below for the recommended cutting RPM. A slower RPM is recommended when the optimum cannot be obtained to maximize cutter blade life.

| Tube OD | Inconel 10 SFM | Hastelloy 20 SFM | 300 Series Stainless Steel 30 SFM | Monel 40 SFM | 400 Series Stainless Steel 50 SFM | Titanium 60 SFM | Carbon Steel 80 SFM | Copper 90 SFM | Copper Nickel 100 SFM | Red Brass 200 SFM | Admiralty Brass 225 SFM | Aluminum 250 SFM |

Powerful Grip For Fast Tube Pulling Super Collet Tube Puller

Strong Gripping Power

The collet teeth have been designed using the same principles as Elliott's proven TT Spear. Offering the gripping power of a spear with the speed and convenience of a collet.

One-Man Operation

Convenient pump control is built into the handles and works seamlessly with Elliott's electric hydraulic pumps.

Wertical Or Horizontal Pulling

Eye-bolts for easily connecting to a counterbalance in both horizontal or vertical pulling applications.

The Next Generation Of Push-Pull Motors

2 еслотт

ET850 Torque Controlled Pneumatic Rolling Motor

A Motor You Can Count On

Elliott's ET850 Motor is the next evolution of pushpull motors. Offering the same USA quality and performance you're used to, the compatibility you need, with additional features to improve the operator's experience.

Motors offer true compatibility with the original Airetool® 850 for convenient maintenance of existing motors.
